GETTING STARTED: YUBICO YUBIKEY 5C NFC & SB2PROD PLATFORM

This guide will help you set up your **Yubico Yubikey 5C NFC** by installing the necessary software and drivers. It also covers how to configure your Mac to access the **StrongKey Production SB2 cluster** ("SB2PROD").

The SB2PROD platform allows you to:

- **Securely share information** with StrongKey using the SKCC app.
- **Download Tellaro software releases** via the SKCD app.
- **Access new secure services** as StrongKey expands its customer support tools.

The StrongKey Support Team

PREREQUISITES

- MacOS 13 and above
- Safari 26.0.1
- Yubikey 5C NFC
- Internet connection
- USB-C port or USB-C-to-USB-A adapter

TABLE OF CONTENTS

A	<u>Installing the Yubico Authenticator Application</u>	4
B	<u>Importing the SB2 Root CA and SB2 Subordinate CA Certificates into macOS Keychain Access</u>	9

SECTION A

A1

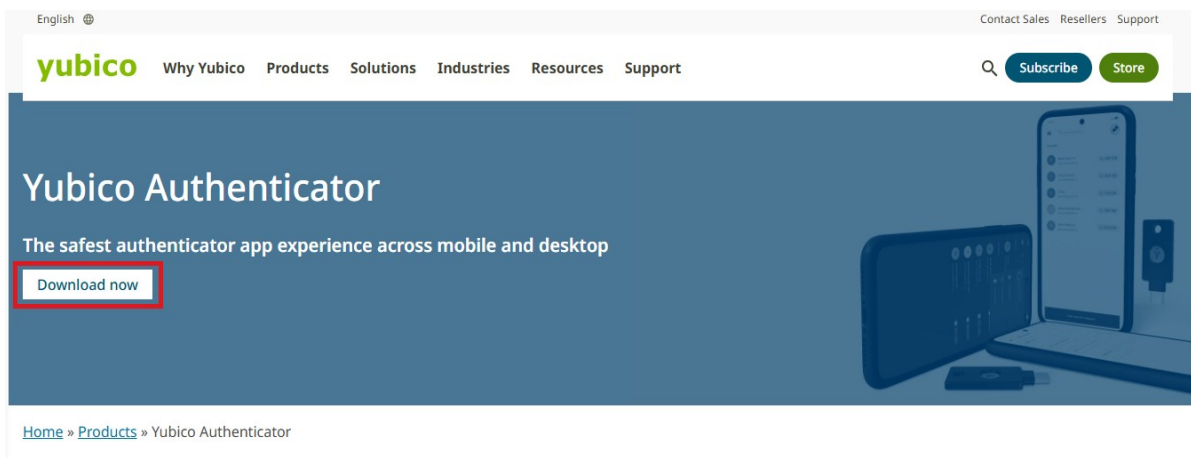

INSTALLING THE YUBICO AUTHENTICATOR APPLICATION

The Yubico Authenticator application is necessary to use the Yubico Yubikey 5C NFC Security Key.

A2

DOWNLOAD YUBICO AUTHENTICATOR APPLICATION

Download the Yubico Authenticator for macOS systems from <https://www.yubico.com/products/yubico-authenticator/#h-download-yubico-authenticator>.

macOS YUBICO AUTHENTICATOR APPLICATION

Select “Download for Mac directly here.” Click it to start download.

The screenshot shows the Yubico website's download page. The page title is "Download Yubico Authenticator". It is divided into two main sections: "Yubico Authenticator for Desktop" and "Yubico Authenticator for Mobile". Under the Desktop section, there are links for Linux, Mac, and Windows. The Mac link "Download for Mac directly here" is highlighted with a red box. Under the Mobile section, there are links for Android and iOS.

English ⓘ Yubico Authenticator App for Desktop and Mobile | Yubico

yubico Why Yubico Products Solutions Industries Resources Support Q [Subscribe](#) [Store](#)

Download Yubico Authenticator

Yubico Authenticator for Desktop

Use the Yubico Authenticator for Desktop on your Windows, Mac, or Linux computers to generate OATH credentials on your YubiKeys.

Linux

- [Download for Linux directly here](#)

Mac

- [Download from macOS AppStore](#)
- [Download for Mac directly here](#)

Windows

- [Download from Microsoft app store](#)
- [Download for Windows directly here \(64-bit\)](#)

Yubico Authenticator for Mobile

Use the Yubico Authenticator for Android and iOS, including secure tap-and-go authentication for NFC-enabled mobile devices.

Android

- [Android Download \(on Google Play\)](#)

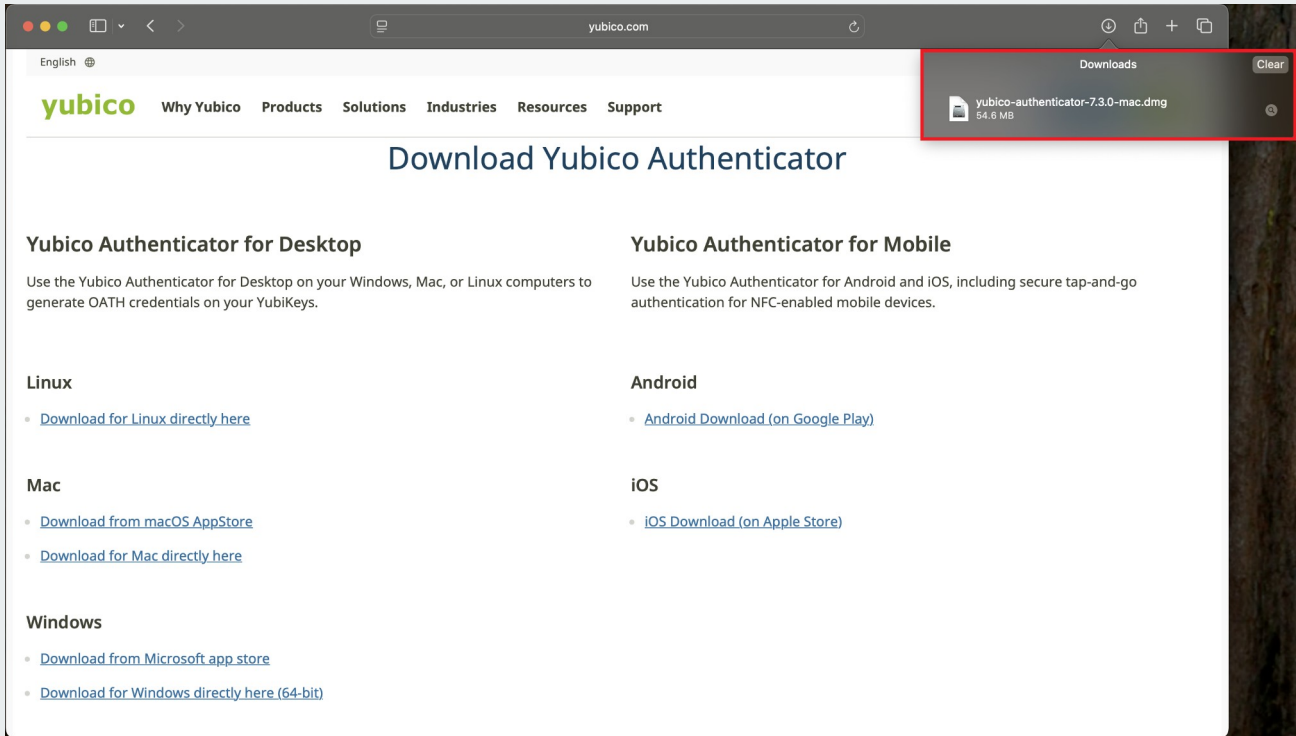

iOS

- [iOS Download \(on Apple Store\)](#)

A4

OPENING THE YUBICO AUTHENTICATOR APPLICATION FILE

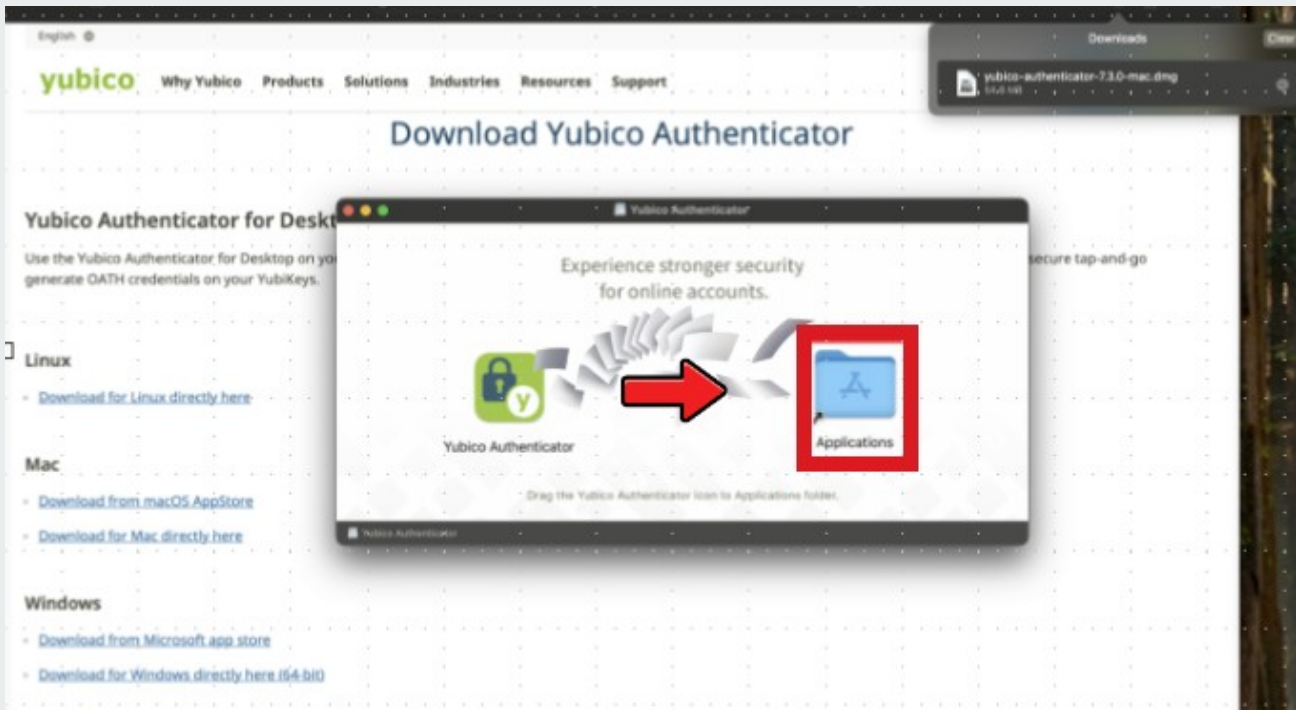

After clicking the download link, Safari will display a pop-up confirming the Authenticator application file has been successfully downloaded and ready for installation. **Double-Click the file to open the installer.**

A5

MOVE AUTHENTICATOR APP TO THE APPLICATIONS FOLDER

When the installer window appears, Drag the Yubico Authenticator icon to the Applications folder.

A6

AUTHENTICATE TO CONTINUE INSTALLATION

After dragging the Yubico Authenticator application to the Applications folder, macOS will prompt for TouchID or Mac Account Password to continue and complete the installation.

SECTION B

B1

IMPORTING SB2 ROOT CA & SB2 SUBORDINATE CA CERTIFICATES ON macOS KEYCHAIN ACCESS

When using Security Keys with digital certificates for authentication to an SB2 site, the SB2 Root Certificate Authority (CA) certificate of the site is a critical component in establishing trust between your browser and the site. It ensures the digital certificate on your Security Key was issued by that SB2 site and is currently valid.

B2

ACCESS THE SB2PKI PAGE

All required CA certificates are available for download from the SB2PKI page at <https://www.strongkey.com/sb2pki>

The screenshot shows a web browser window with the URL <https://www.strongkey.com/sb2pki> in the address bar. A red arrow points to the search bar. The page content includes the StrongKey logo, a welcome message, and sections for downloading CA certificates and configuring security keys.

STRONGKEY

Welcome to the **StrongKey Tellaro Small Business Security Bundle (SB2)**

This page provides information to help you get started working with SB2

-------	------------	------------	-------

B4

DOWNLOADING THE SB2 ROOT CA

First, click the **Download Root CA** button (1). The download will begin automatically, and you'll see a dialog box confirming the file name once the process is complete (2).

REPEAT this process for the Sub CA 1 and Sub CA 2 certificates.

B5

ACCESS macOS FINDER

To get started installing the certificates, open the **Finder** application by clicking its icon in the **Dock** or by selecting it from the menu in the upper left corner of your screen.

B6

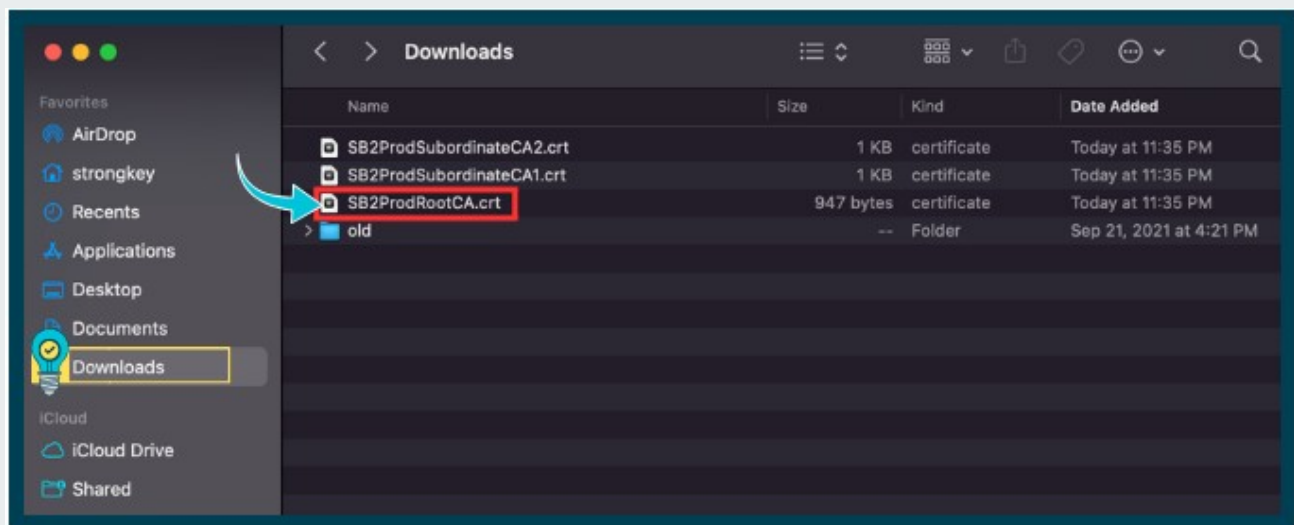

LOCATE DOWNLOADED SB2 ROOT CA FILE

Navigate to the **Downloads** folder in **Finder**. Locate the **SB2 Root CA** file and **right-click** it.

NOTE

Please note that your specific **SB2 certificate files** may have a different name. Ensure you know the correct file name before proceeding.

B7

OPEN KEYCHAIN ACCESS

Launch **Keychain Access** by searching with **Spotlight** [⌘ + Space] (refer to Image 1), or by navigating to **Applications** in **Finder** (see Image 2).

Image 1

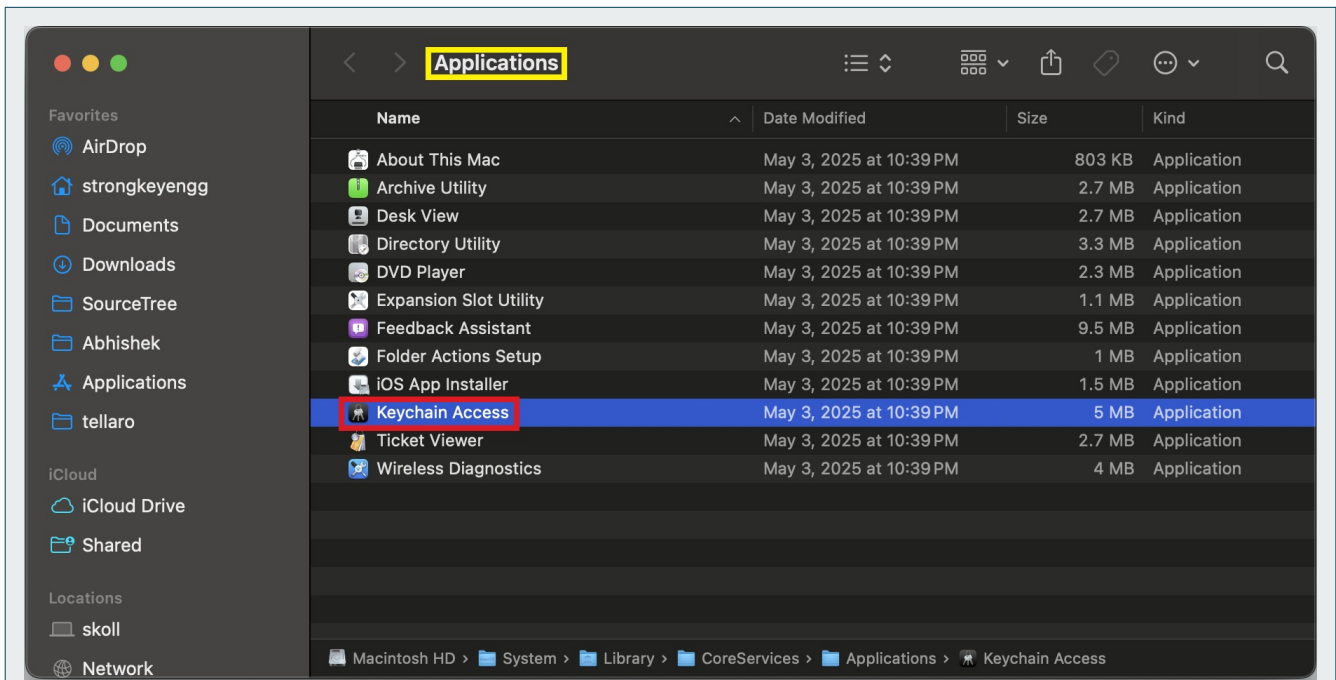

Image 2

B8

NAVIGATING IN THE KEYCHAIN ACCESS APPLICATION

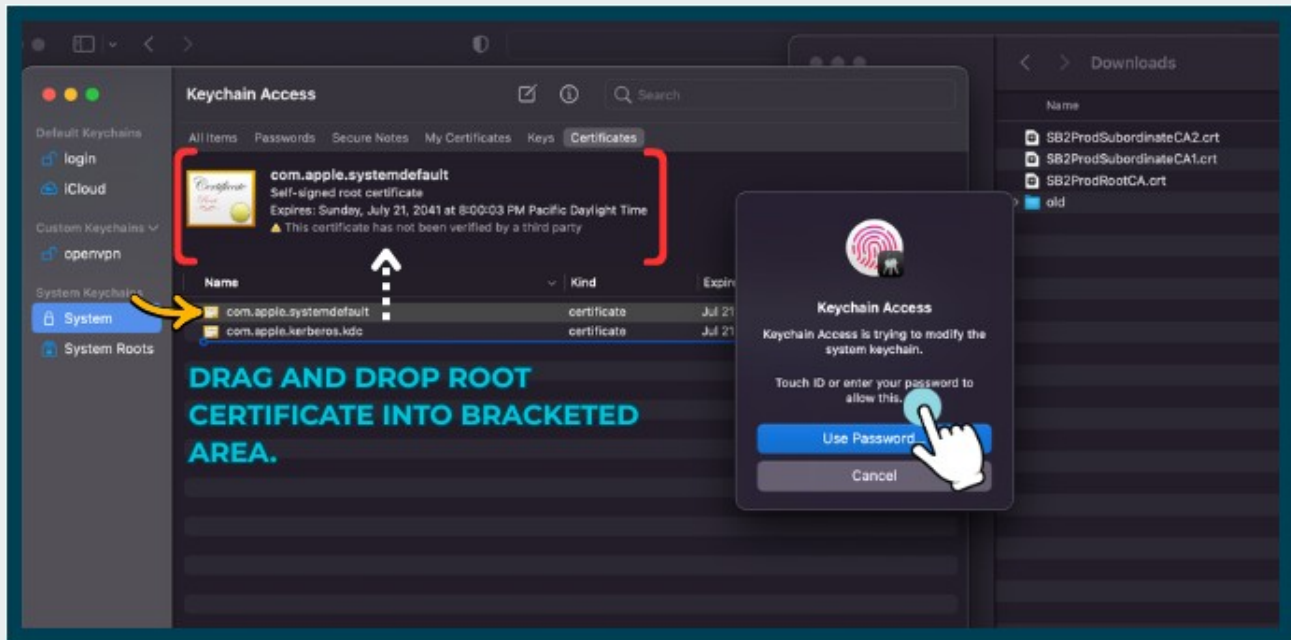

After launching the **KeyChain Access** application, the following screen appears. Select **System** in the sidebar, followed by **Certificates** in the top menu.

B9

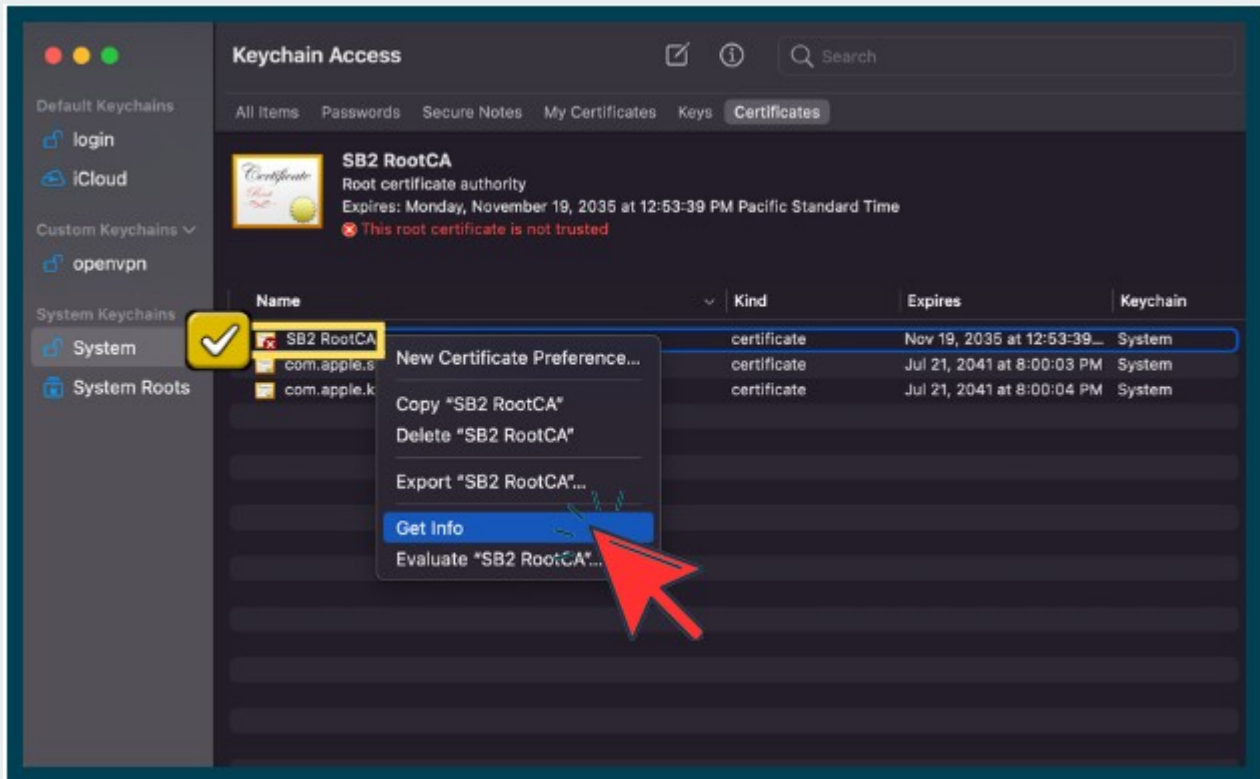

IMPORTING CERTIFICATES

Next, drag the **Root Certificate** into the **Keychain Access** window to begin the certificate import process. The macOS will prompt you to authenticate using Touch ID or an account password to complete the import.

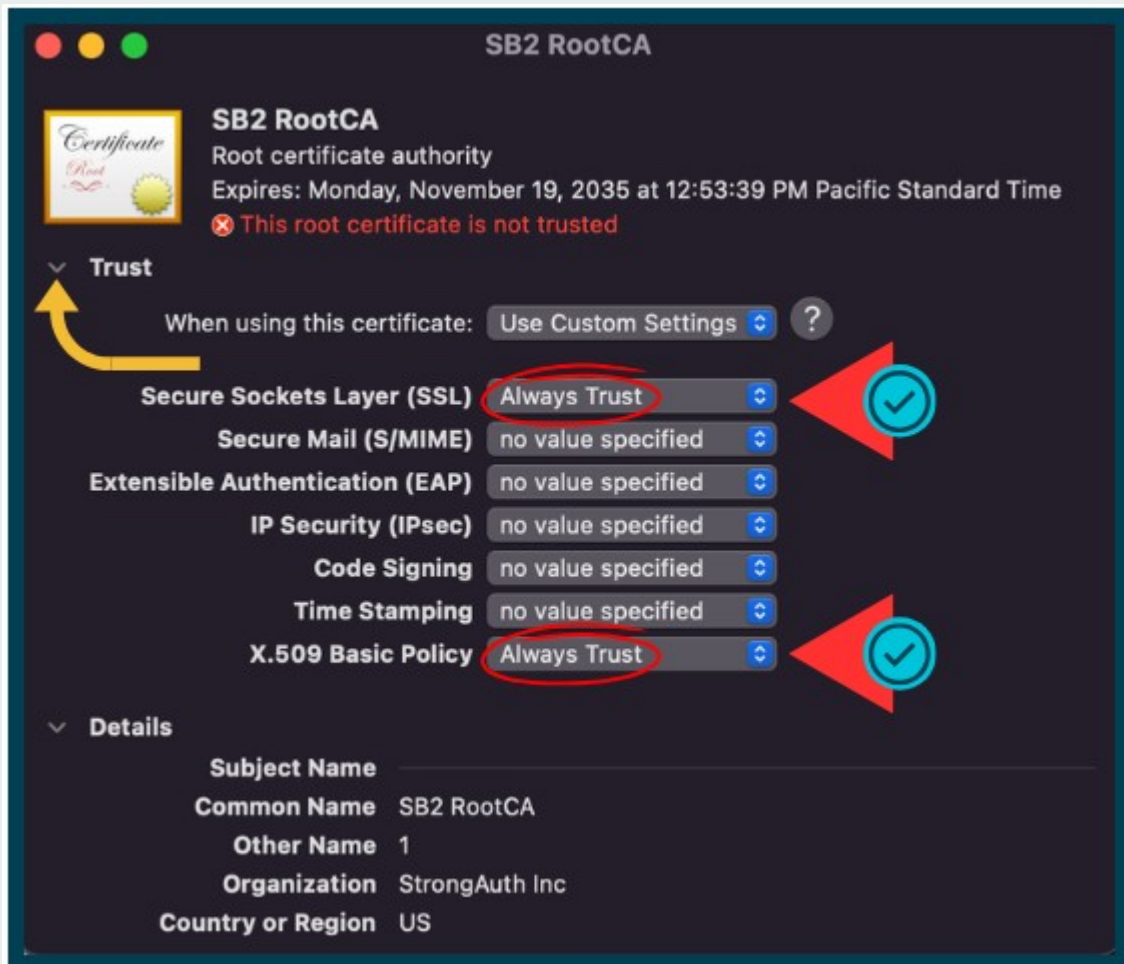

ACCESS THE SB2 ROOTCA CERTIFICATE

Right-click on the imported SB2 RootCA certificate, then select **Get Info** to view its details.

TRUST THE SB2 ROOTCA CERTIFICATE

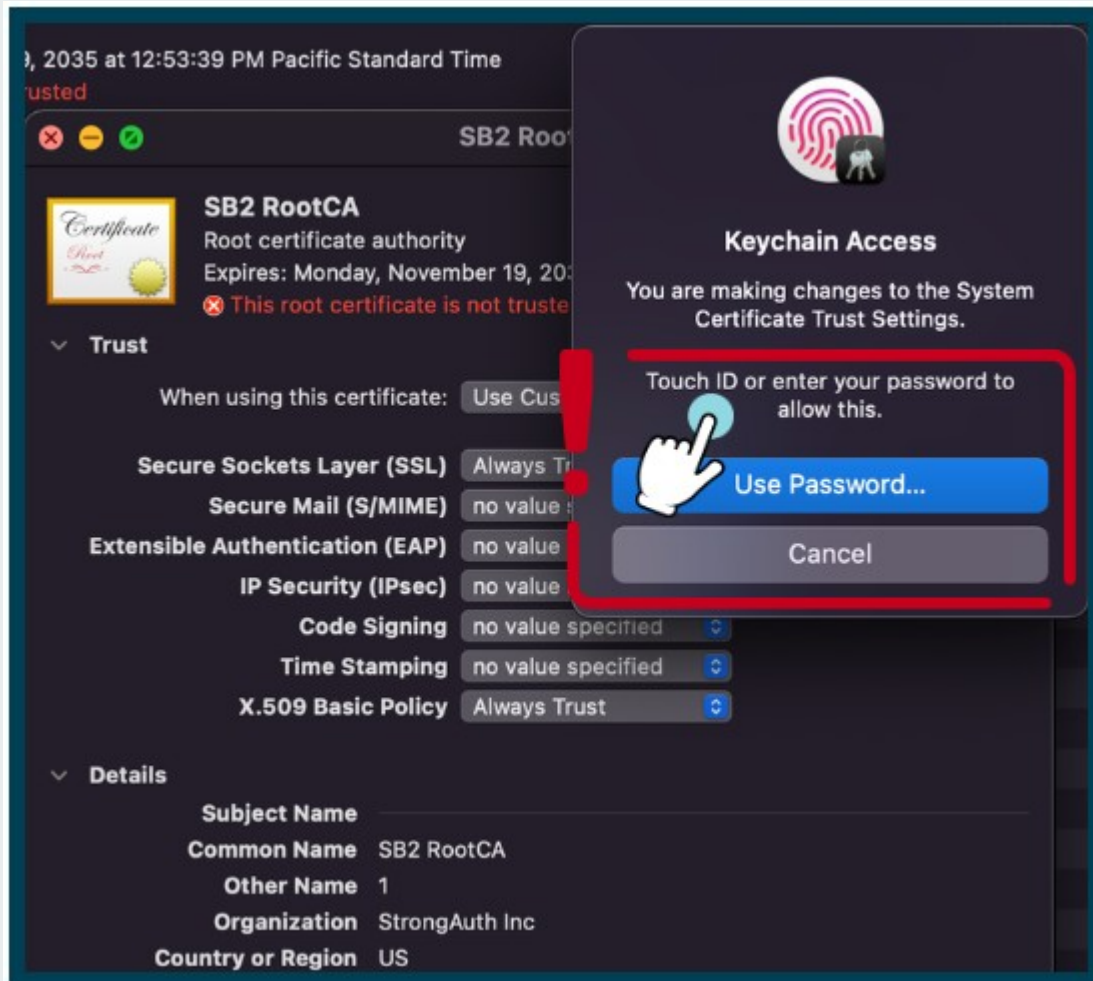

To view the **Trust** details, click the down arrow next to the Trust option. Then, select **Always Trust** for both **Secure Sockets Layer (SSL)** and **X.509 Basic Policy**.

B12

AUTHENTICATING THE CHANGES TO THE SB2 ROOTCA CERTIFICATE

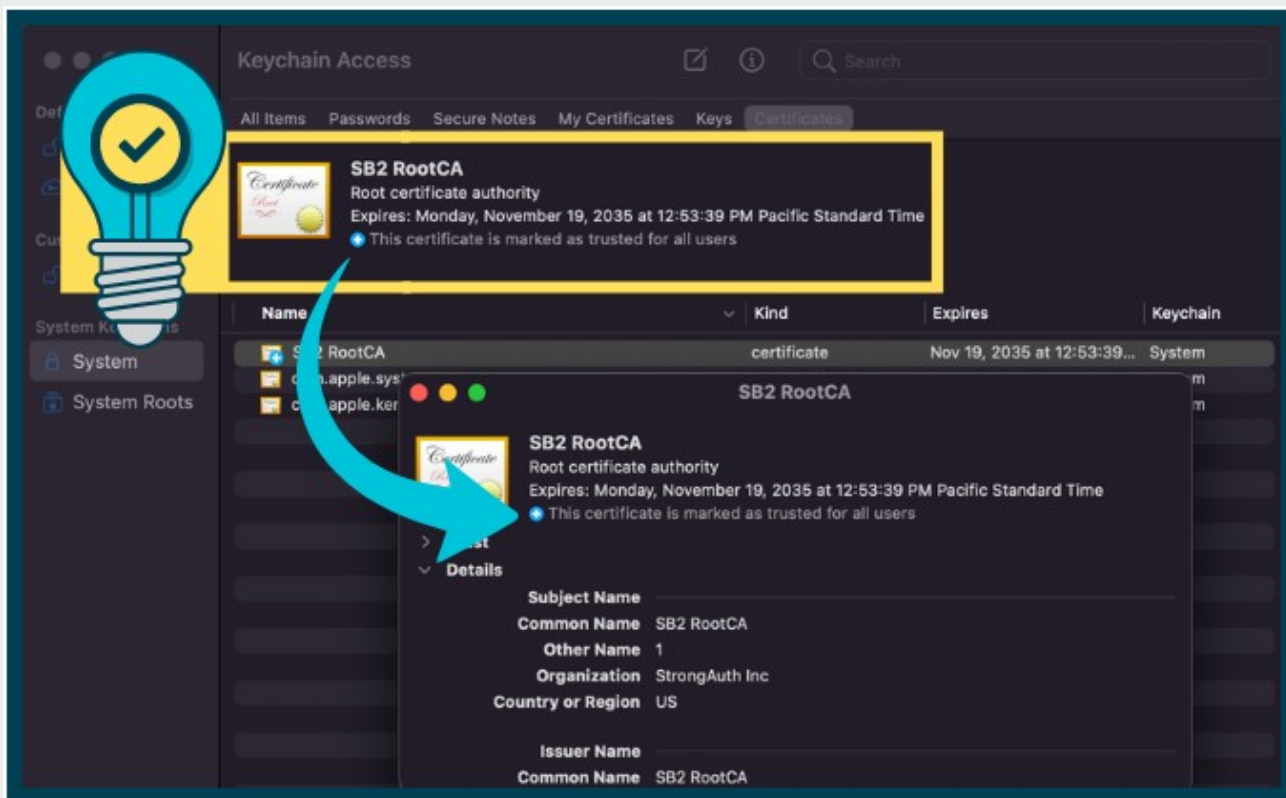

After the SB2 RootCA Get Info window is closed, macOS prompts for authentication, using either Touch ID or the macOS account password, to confirm changes to the Trust settings.

B13

CONFIRMING THE TRUST CHANGES

Click **Next** to continue. To confirm the trust settings, **right-click** the SB2 RootCA certificate and select **Get Info**. A successful import and trust is indicated by the message: *“This certificate is marked as trusted for all users.”*

B14

ACCESSING THE DOWNLOADED SUBORDINATE ROOT CERTIFICATE FILES

To get started, launch **Keychain Access** by searching with **Spotlight** [⌘ + Space] (refer to Image 1), or by navigating to **Applications** in **Finder** (see Image 2).

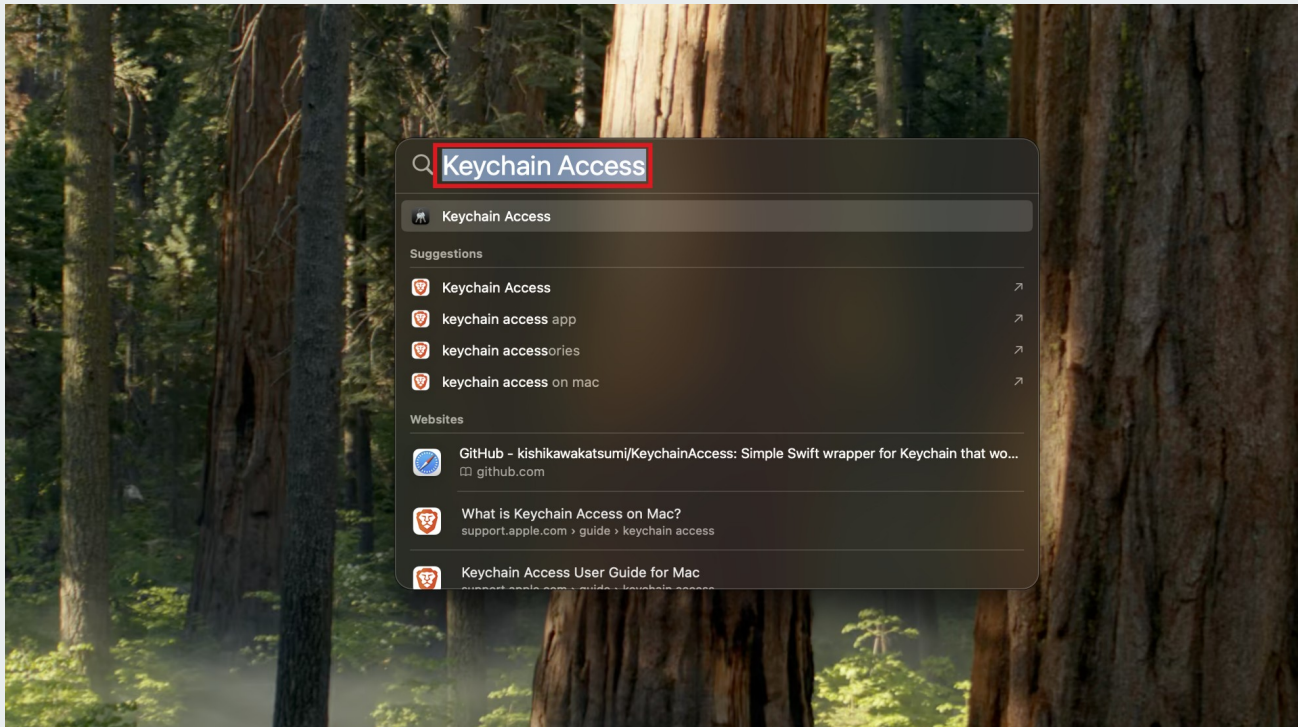

Image 1

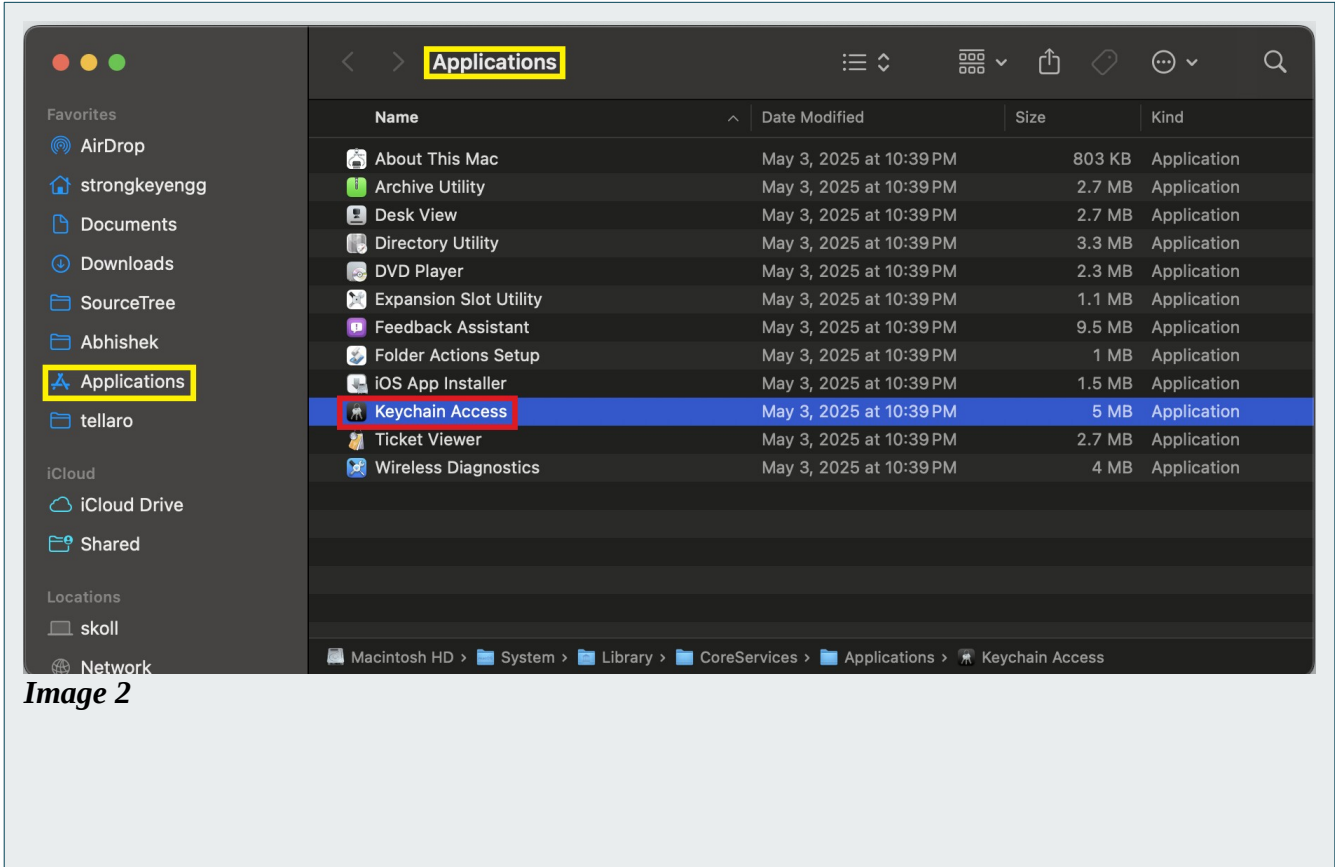

Image 2

B15

NAVIGATING IN THE KEYCHAIN ACCESS APPLICATION

After launching the **KeyChain Access** application, the following screen appears. Select **System** in the sidebar, followed by **Certificates** in the top menu.

B16

IMPORTING CERTIFICATES

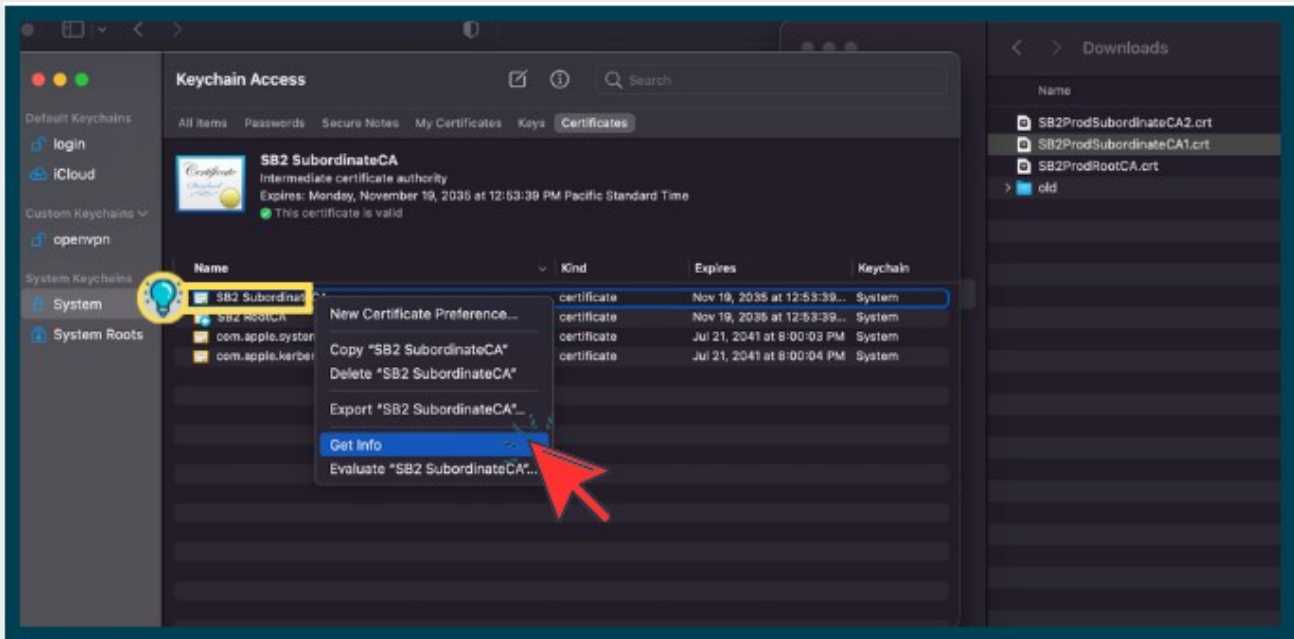

Next, drag the **SB2-SubordinateCA.crt** file into the **Keychain Access** window to begin the certificate import process. The macOS will prompt you to authenticate using Touch ID or an account password to complete the import.

B17

ACCESS THE SB2 SUBORDINATE CA CERTIFICATE DETAILS

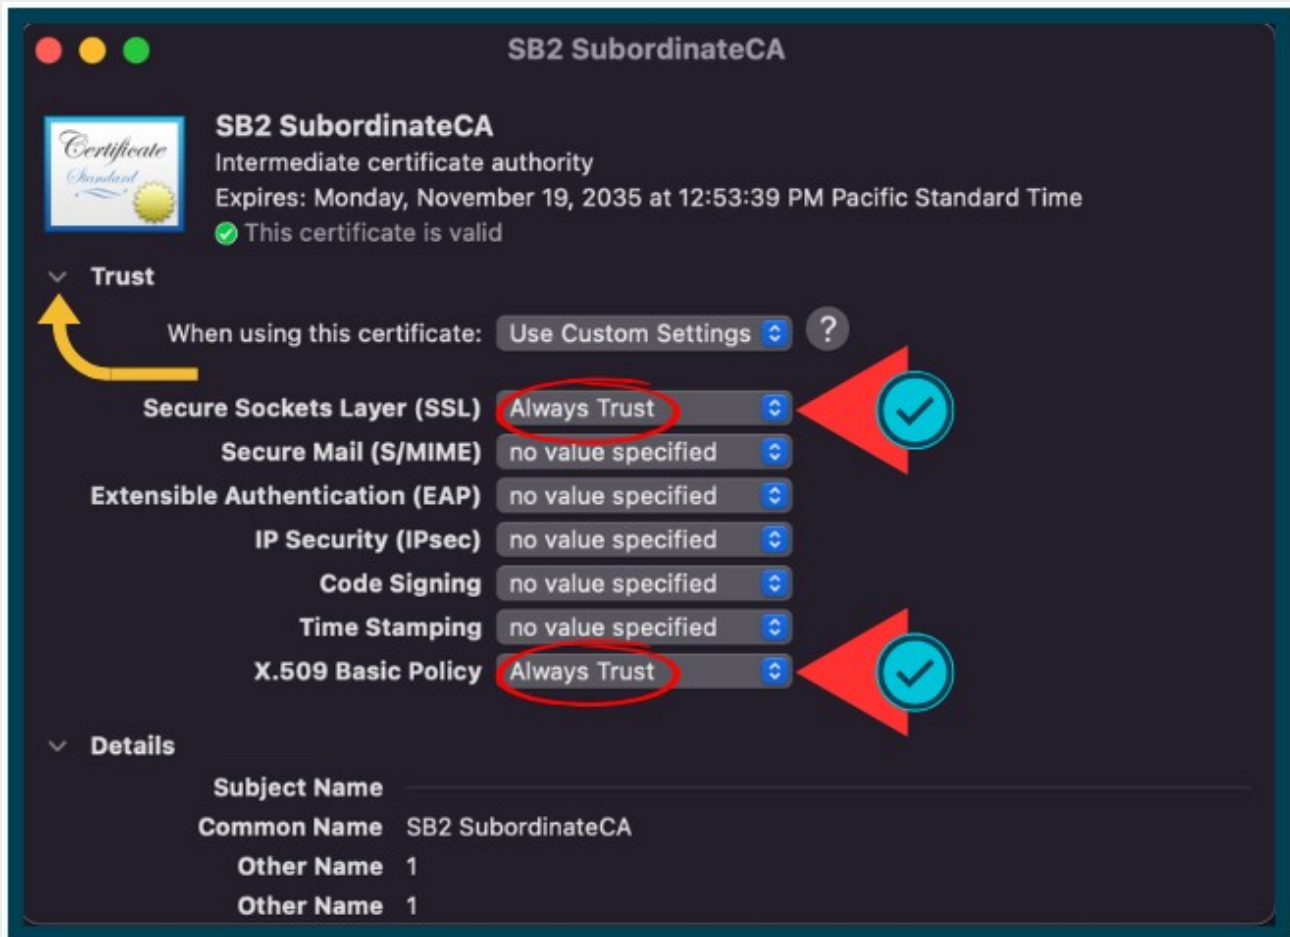

Right-click on the imported SB2 SubordinateCA certificate, then select **Get Info** to view its details.

B18

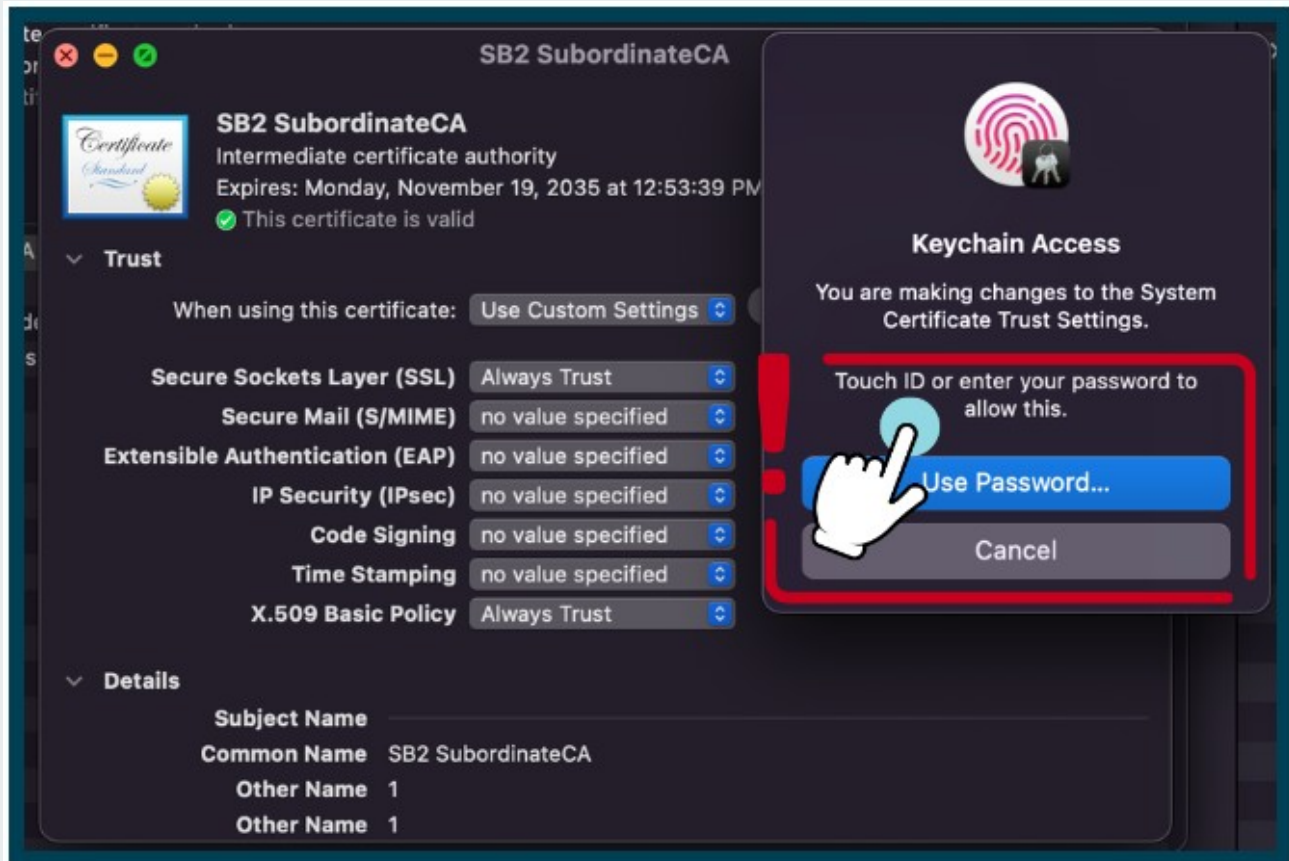

TRUST THE SB2 SUBORDINATE CA CERTIFICATE

To view the Trust details, click the down arrow next to the Trust option. Then, select Always Trust for both Secure Sockets Layer (SSL) and X.509 Basic Policy.

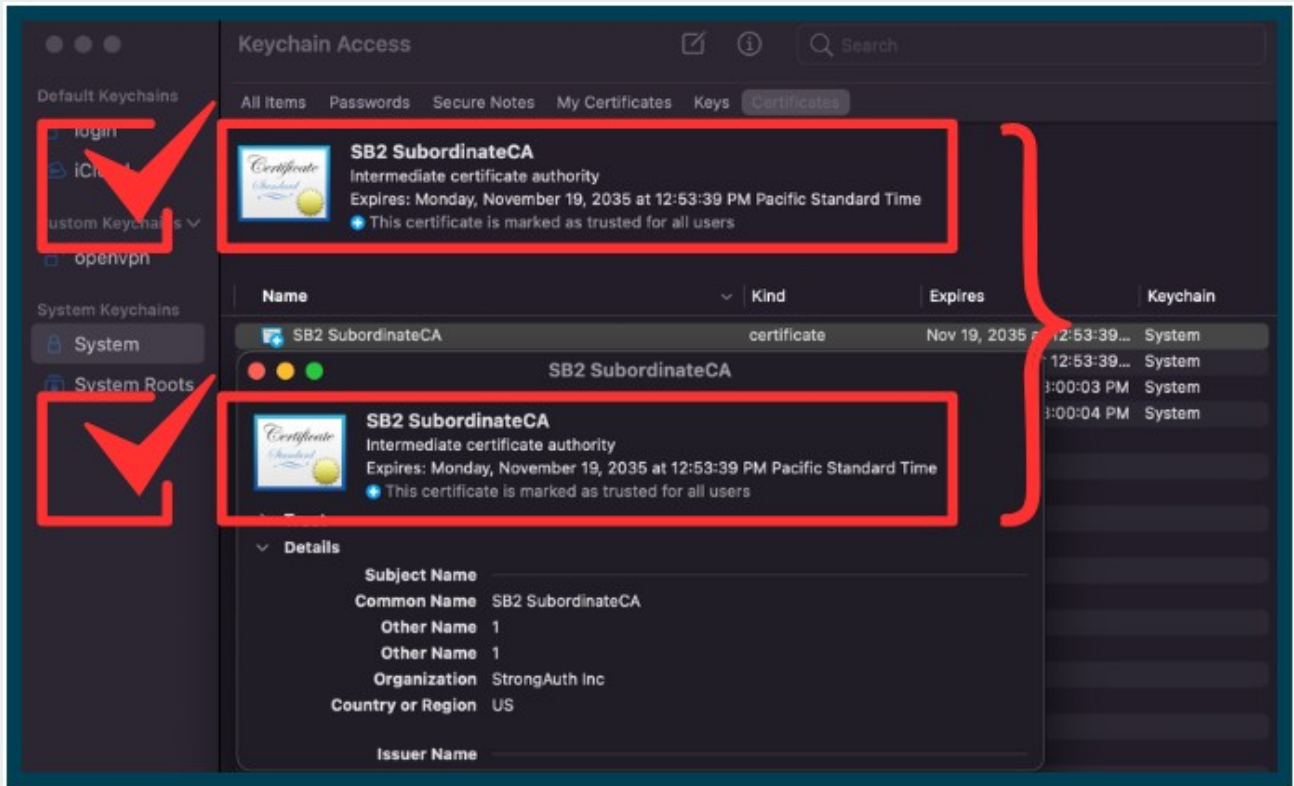

AUTHENTICATING THE CHANGES TO THE SB2 SUBORDINATE CA

After the SB2 SubordinateCA Get Info window is closed, macOS prompts for authentication, using either Touch ID or the macOS account password, to confirm changes to the trust settings..

To confirm the trust settings, right-click the SB2 SubordinateCA certificate and select **Get Info**. A successful import and trust is indicated by the message: *“This certificate is marked as trusted for all users.”*

SECTION C

C1

ACCESSING SB2PROD INVITATION LINK

This section will review the steps of accessing the invitation link you received to register a FIDO credential with your Yubikey 5C NFC Security Key with the SB2PROD site.

You must have the Yubikey 5C NFC Security Key – **with Security Key PIN** and the SB2PROD Invitation URL that was sent to you for the FIDO registration process.

C2

PLUG IN THE YUBIKEY 5C NFC SECURITY KEY

Plug the **Security Key** into the USB-C port (or the USB-C to USB-A adapter).

IDENTIFYING THE USB-C PORT

Locate the USB-C port—typically found along the edge of the computer, it features a compact design with smooth, rounded corners that set it apart from traditional USB-A ports.

The image below shows both a USB-C port and its matching male connector.

NO USB-C PORT? NO PROBLEM.

With the USB-A to USB-C adapter provided by the Administrator of your SB2 site, simply plug the USB-A end into the computer and insert the Security Key into the USB-C port.

The provided USB adapter pictured below.

OPEN THE SAFARI BROWSER

To begin, access the Safari browser by searching with **Spotlight** [⌘ + Space].

LOCATE THE FILE MENU

In the top-left corner of the menu bar, click the File menu to proceed.

OPEN A NEW PRIVATE WINDOW

Always use Private mode in the Safari browser to access the SB2PROD platform URL (<https://sb2.strongkey.com>).

SB2PROD PLATFORM URL

In the InPrivate browser address bar, enter the provided SB2PROD Platform invitation link. You will receive the link in an email from a member of the StrongKey Team.

NOTE

The SB2 registration invite URL is long so it will be advantageous to use the “cut and paste” options. Here is an example of what the URL will look like:

[https://sb2.strongkey.com/sb2/register?
hash=3d500dec79f6ec257ebddcc56hj78ff1f2d31d557d4c7bf5654](https://sb2.strongkey.com/sb2/register?hash=3d500dec79f6ec257ebddcc56hj78ff1f2d31d557d4c7bf5654)

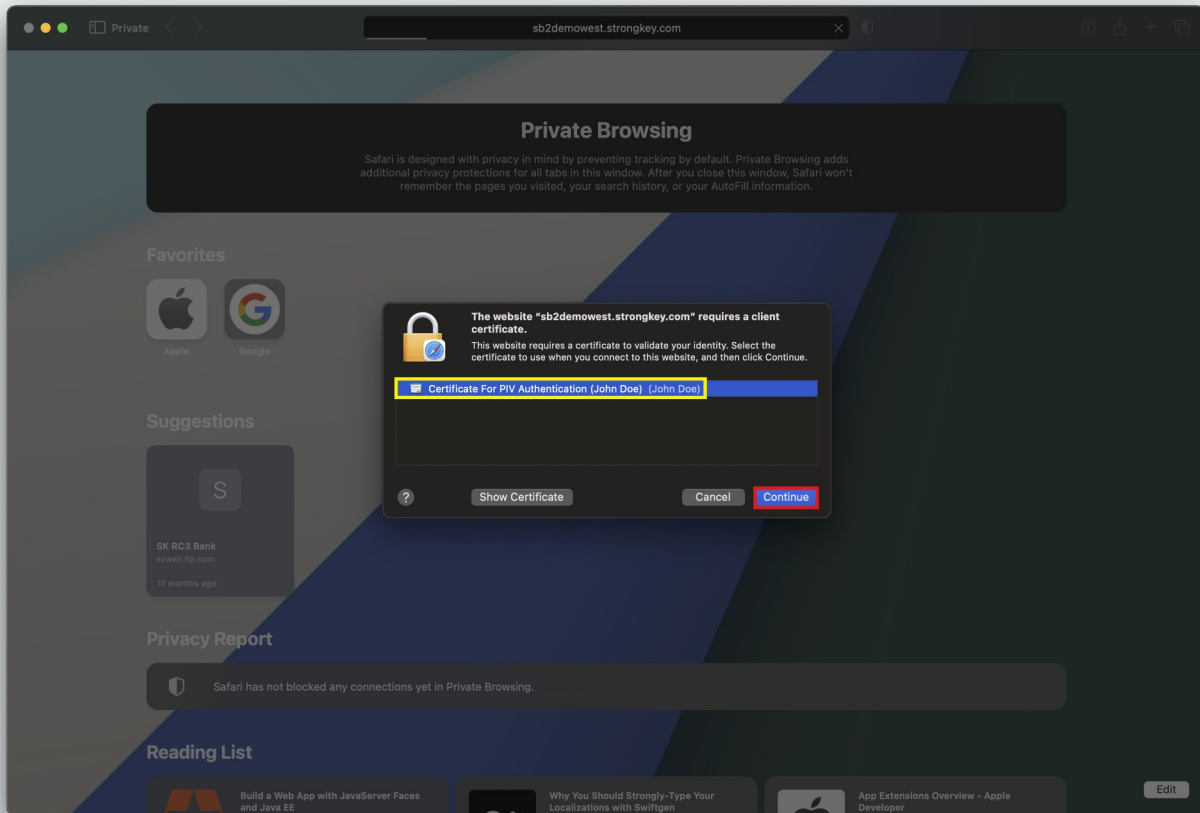

SELECT THE CERTIFICATE

A pop-up window will display the available certificates (yellow box). The name in the prompt should match your name, as created by the Administrator of the SB2 PROD site. Select the presented certificate and **click OK** to proceed.

NOTE

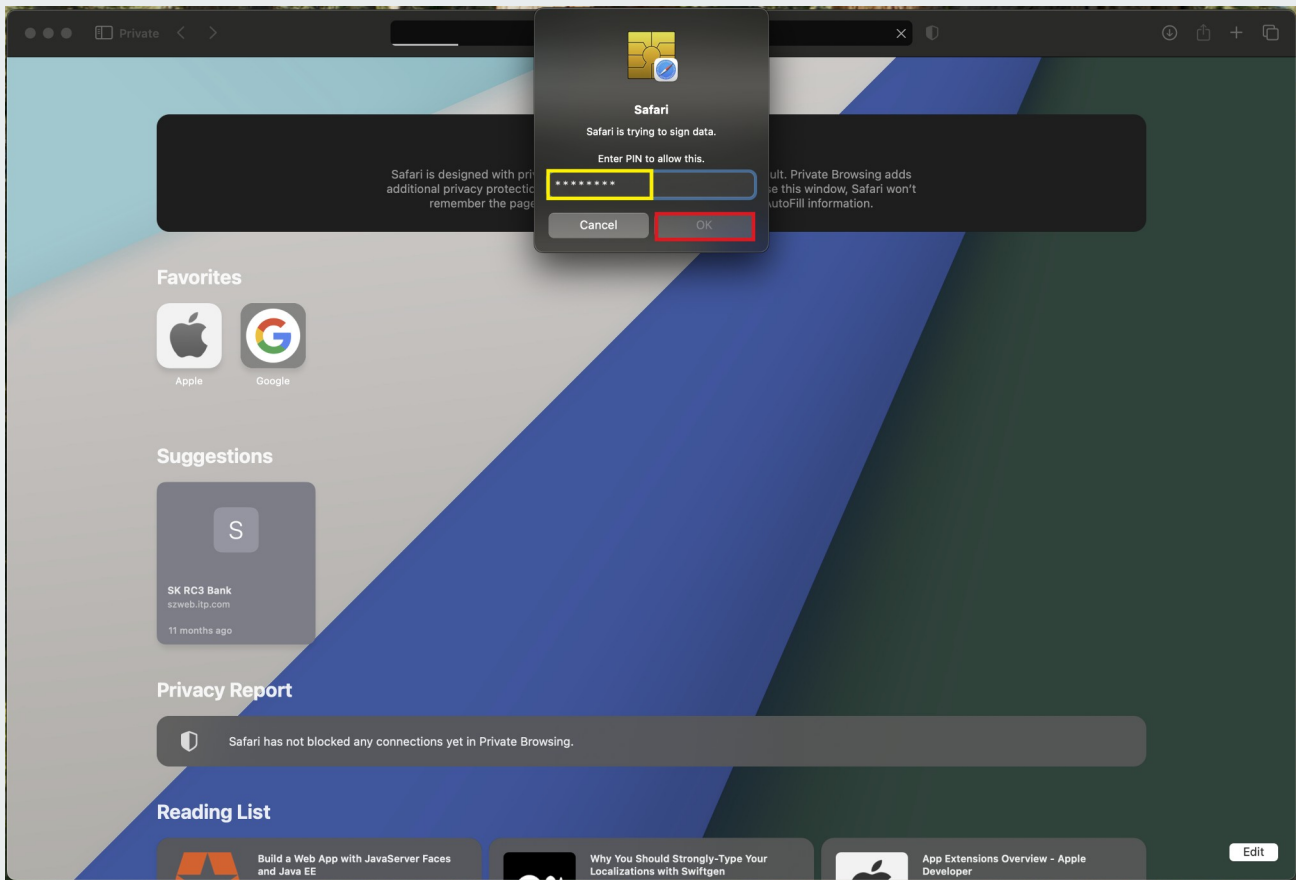

You will only see a certificate prompt if the **SB2 Root CA** and **SB2 Subordinate CA** certificates were imported correctly on your computer. If you do **NOT** see a certificate prompt, please contact ssupport@strongkey.com for support.

The next dialog box will prompt for the Yubikey 5C NFC (aka Smartcard) **PIN**. Enter and **click OK** to continue. This PIN should have been provided by the Administrator of the SB2 platform site.

For instructions on changing the Yubikey PIN, refer to the [Appendix](#) of this guide.

Upon successful authentication with the digital certificate, the following one time **SB2 Landing Page** will be displayed. This page has three (3) sections:

- On the left-hand side, some details of your digital certificate information will be displayed (Cypher's critical details have been redacted to protect his privacy.).
- Legal disclosures for the SB2 platform are located in the middle section. You must scroll all the way to the bottom and agree to the terms disclosed before you may continue with this process.
- Use the right-hand panel to nickname your Security Key. This makes it easier to identify each key if you use more than one.

Disclosures
 If you agree with the terms presented here, check the box below and register your Security Key. You agree to:

8. Users who are uncertain about which Personal Data is mandatory are welcome to contact the Owner.
 9. The Owner takes appropriate security measures to prevent unauthorized access, disclosure, modification, or unauthorized destruction of the Data.
 10. The Data concerning the User is collected to allow the Owner to provide its Service, comply with its legal obligations, respond to enforcement requests, protect its rights and interests, detect any malicious or fraudulent activity, as well as the following: User data management, Registration and authentication.
 11. User Data Management: This type of

Your Security Key
 You were provided with a Security Key (resembling the following image), containing a digital certificate enabling you to see this site. The Security Key will also be used to register a new FIDO credential to authenticate you.

You may give the Security Key a nickname below – such as “JD’s vault credential” or “John Doe’s access key” – to distinguish it from additional Security Keys you may already own and/or acquire in the future.

When you select Register below, you will be prompted for a PIN to the Security Key, and to touch the metal surface with a blinking LED on the Security Key.

Name

Review and accept the terms and conditions in the **Disclosures** panel. The “**I agree**” box must be checked before proceeding with Security Key registration see D13 image).

In the Security Key panel on the right, enter a descriptive nickname for the key in the "Name" field. Then select Register to complete the process. Names are typically short (up to 16-20 alpha-numeric characters), such as:

- John's Yubikey 5C Security Key for sb2.strongkey.com
- Yubikey for sb2.strongkey.com

C14 CONTINUE SETUP

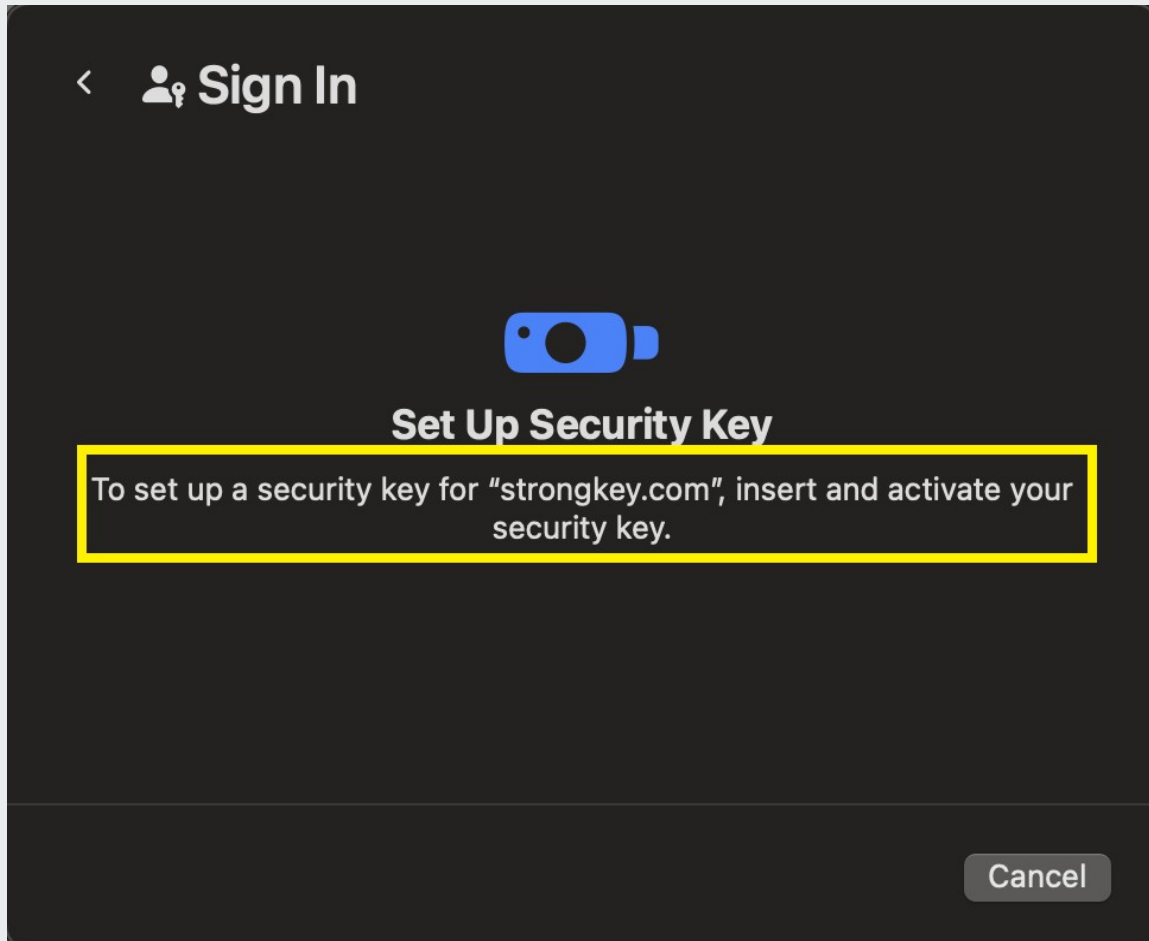

A dialog box will appear to confirm continuation of the setup process, authorizing the current device to also access the SB2PROD website. **Touch your Security Key** to proceed.

Next, select the **Security Key** for location of where the credential is stored. It is important to verify this location as the Security Key. **Click Continue** to proceed.

Confirm the SB2PROD login by touching the blinking LED on your security key's metal contact.

C17

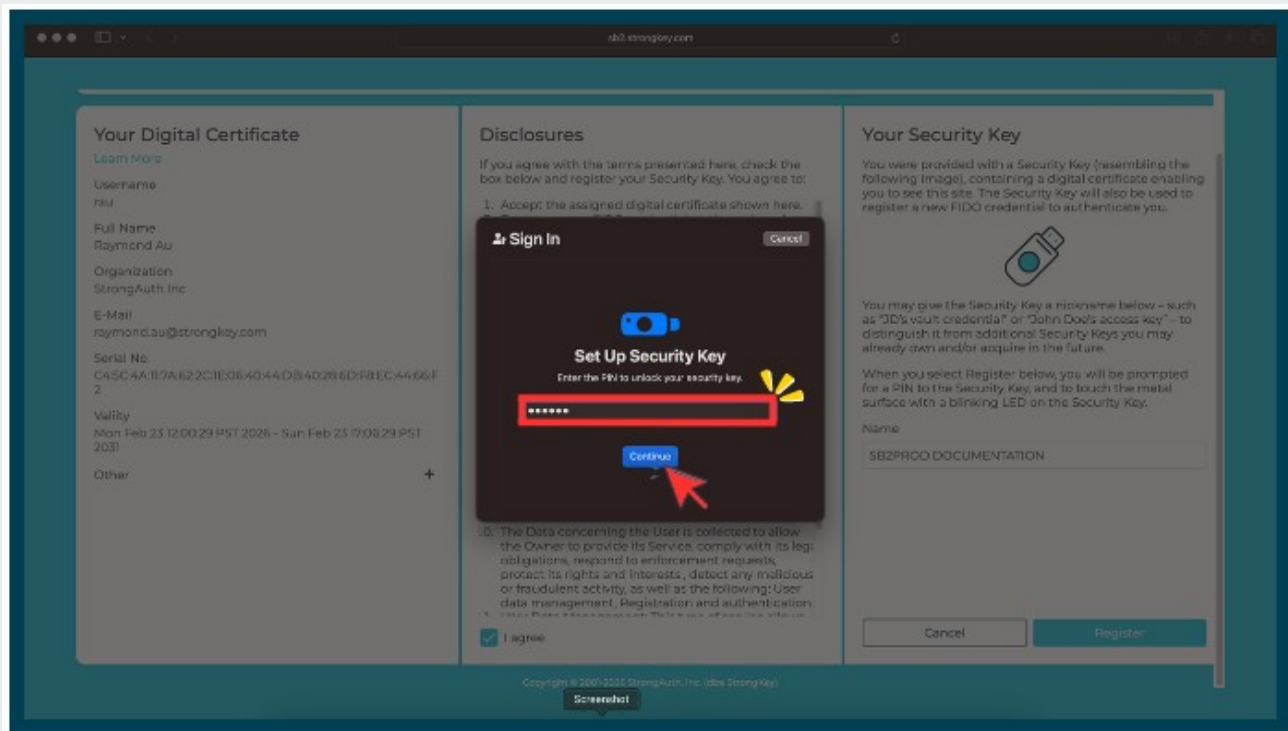

ENTER SECURITY KEY PIN

To continue adding a credential to the **Security Key**, enter the PIN and **click Continue**.

NOTE

This step is called **User Verification (UV)** in the FIDO ecosystem. It confirms that the SB2PROD platform is interacting with the legitimate Security Key owner by verifying your PIN, which should never be shared. Each time you use your FIDO credential to sign in, you'll complete this UV step as a required security measure.

C18

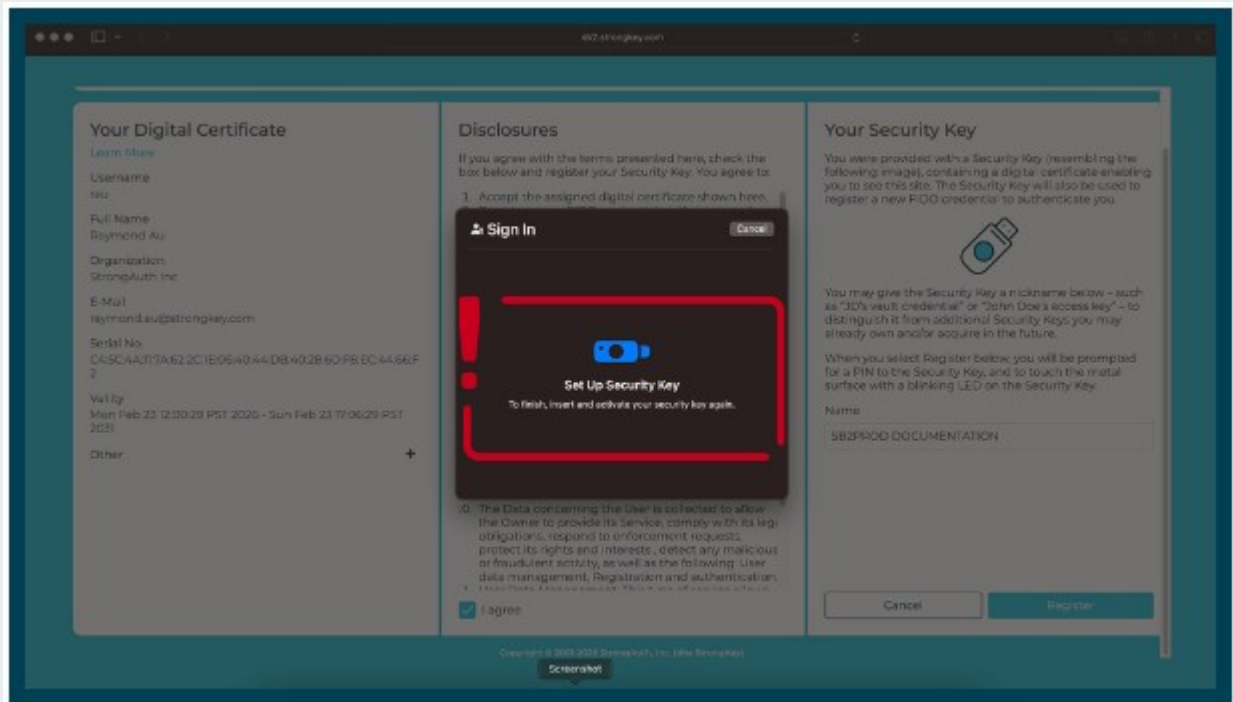

TOUCH THE SECURITY KEY

To continue the setup, touch the metal contact visible on the **Security Key** with your finger - it will have a light-emitting diode (aka LED) blinking to indicate where it must be touched.

NOTE

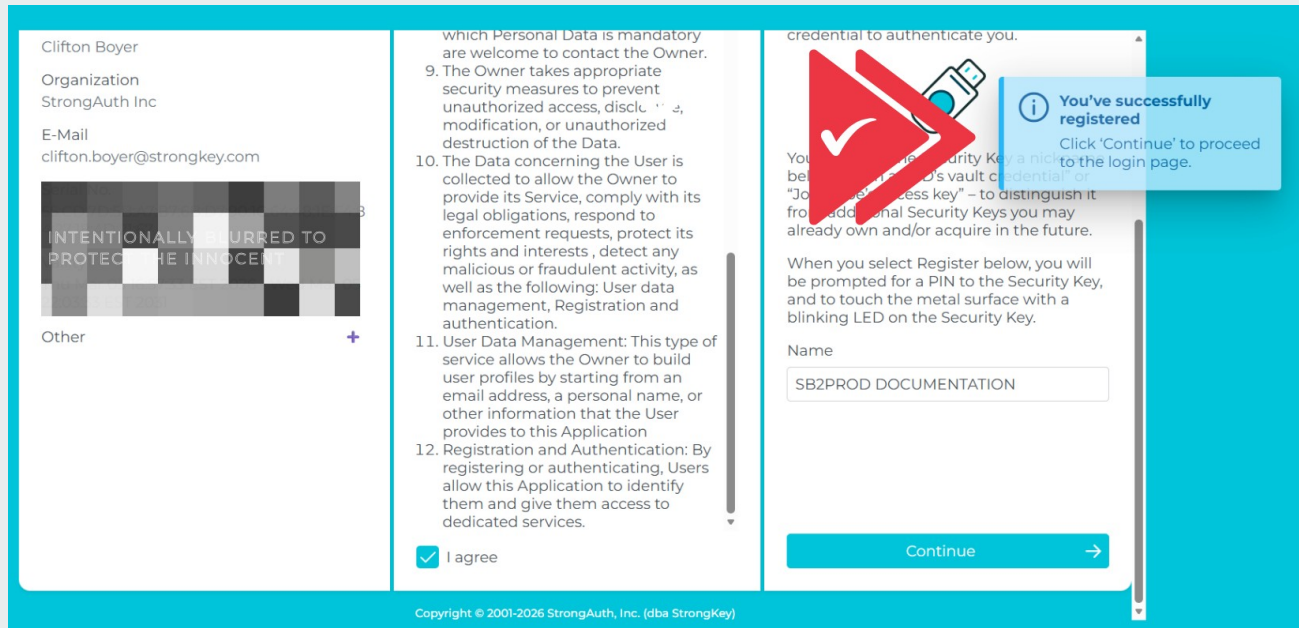

This step is called the “Test of User Presence” (TUP) in the FIDO ecosystem. It ensures that no remote attacker can impersonate you, because they would need both your Security Key and your physical interaction at your computer. Each time you use your FIDO credential to sign in to the SB2 platform, you’ll complete this brief TUP check as a security safeguard.

SB2PROD CONFIRMATION

After touching the security key, SB2PROD will flash a blue message confirming successful registration.

SELECT SECURITY KEY

After clicking **Continue**, a prompt will appear prompting you to sign in with the new credential. Make sure you choose the **Security Key** when authenticating to the SB2PROD platform, and click **Continue**.

Sign In

Choose how you'd like to sign in to your "strongkey.com" account.

 iPhone, iPad, or Android device
Use passkey from a device with a camera

 **Security key**
Use an external security key

Continue

Cancel

The next dialog box will ask you to activate your Security Key. Please insert now.

< **Sign In**

Use Security Key

To continue with "strongkey.com", insert and activate your security key.

Cancel

USER AUTHENTICATION

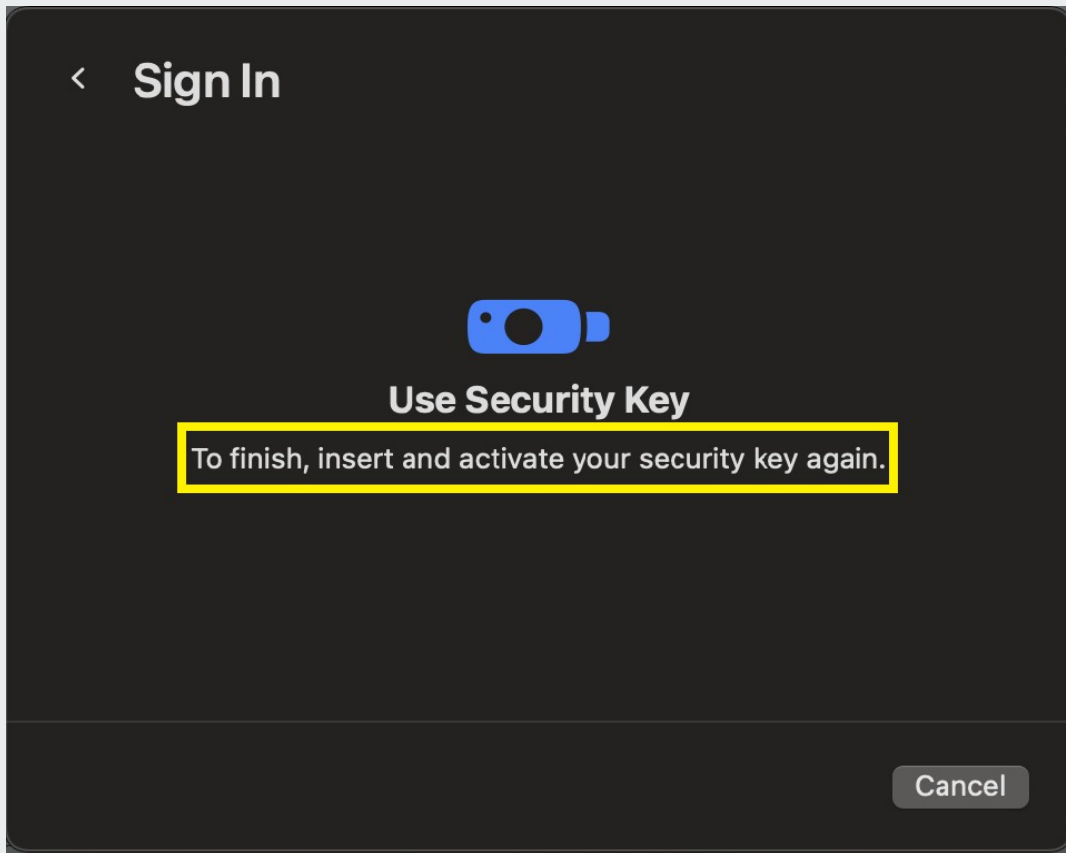

The next dialog box will verify the user. Enter the PIN to the **Security Key** and click **Continue**.

TEST OF USER PRESENCE (TUP)

To continue the login procedure, touch the metal contact on top of the **Security Key** – this confirms a user is present and attempting to sign in from that computer with a legitimate credential on the Security Key.

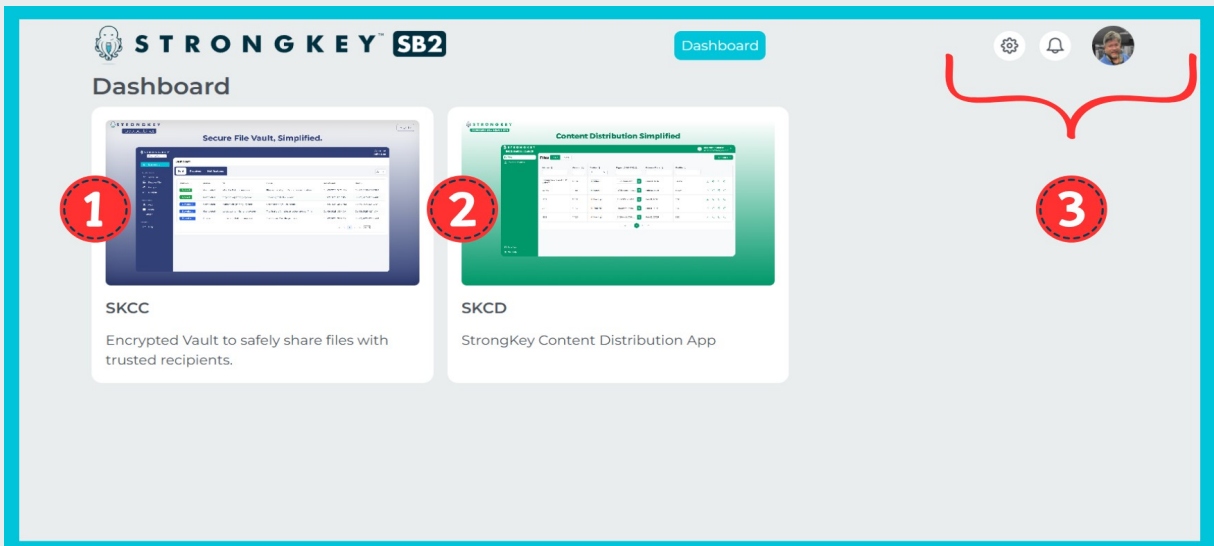

SB2 PLATFORM DASHBOARD

CONGRATULATIONS! Your access to the **SB2PROD Platform** has been successfully established, and your Security Key with your new FIDO credential is registered. Your account name is displayed on the right side of the screen. You may click the gear icon to edit your profile.

All SB2 users have access to two primary applications:

- **StrongKey CryptoCabinet (SKCC):** For securely storing and sharing encrypted files containing sensitive data.
- **StrongKey Content Distribution (SKCD):** For storing and sharing digitally signed, unencrypted documents.

Clicking either image on the SB2 Dashboard opens the application in a new browser tab. Detailed user guides for both SKCC and SKCD are available separately.

APPENDIX

NOTE: This document is for StrongKey customers, employees, suppliers and partners who will interact with the StrongKey Production SB2 cluster (“SB2PROD”) for business operations.

YUBICO YUBIKEY 5C NFC SECURITY KEY: CHANGING THE PERSONAL IDENTIFICATION NUMBER (PIN)

This appendix guides you through changing your PINs on the Yubico Yubikey 5C NFC Security Key.

API

CHANGING A YUBIKEY 5C NFC PIN

The **Security Key** is a very powerful cybersecurity device and represents the state-of-the-art in multi-factor authentication (MFA) technology that does not use any passwords. The MFA is supported by the:

- **Possession factor** – where the physical possession of the Security Key is essential to the authentication process;
- **Knowledge factor** – where know the PIN to the Security Key is also essential to the authentication process.

Since the **Security Keys** provided with the SB2 use two different NIST-approved, passwordless authentication protocols, there are two containers for the cryptographic keys used with the protocols. Each container is managed by a separate PIN.

However, StrongKey recommends using the SAME PIN to both containers of the **Security Key** to reduce the burden on users. As long as the **Security Key** is safely in the possession of the legitimate user, and the legitimate user is NOT sharing the PIN to the **Security Key** with anyone, the user will be complying with one of the strictest security policies recommended for access control.

This document outlines the process for changing the two required PINs – one for the PIV certificate and the other for the FIDO credential.

OPEN THE YUBICO AUTHENTICATOR APPLICATION

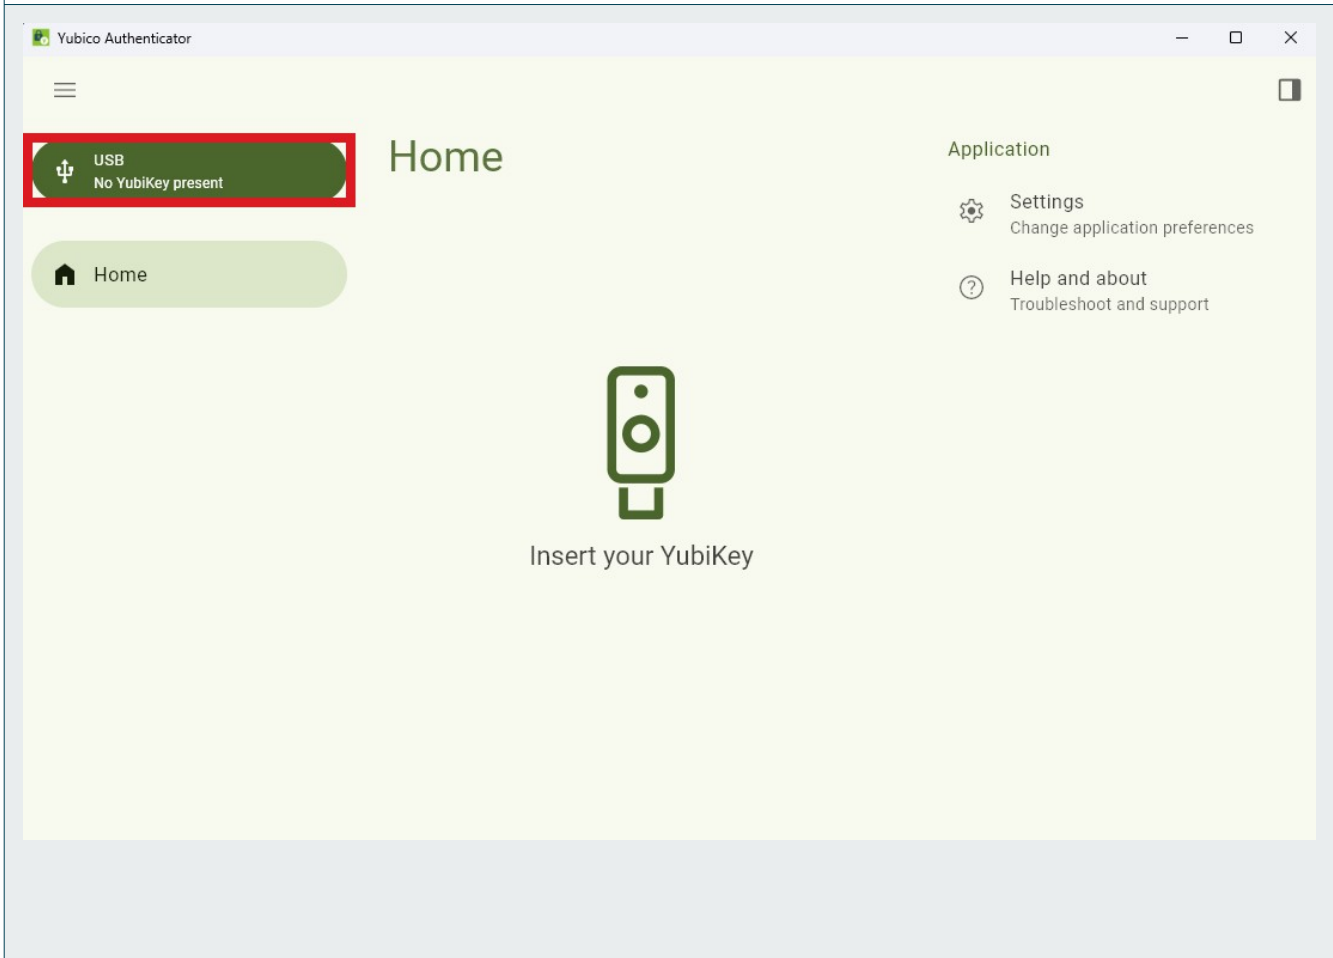

To begin, open the Yubico Authenticator application by searching for it with Spotlight ($\text{Command} + \text{Space}$) or locating it in Finder's Applications folder.

AP3

THE YUBICO AUTHENTICATOR APPLICATION

Upon opening, the application displays the screen shown below and indicates “No Yubikey Present.”

AP4

INSERT THE YUBIKEY 5C NFC

Plug the Security Key into the USB-C port.

AP5

IDENTIFYING THE USB-C PORT

Locate the USB-C port—typically found along the edge of the computer, it features a compact design with smooth, rounded corners that set it apart from traditional USB-A ports. The image below shows both a USB-C port and its matching male connector.

NO USB-C PORT? NO PROBLEM.

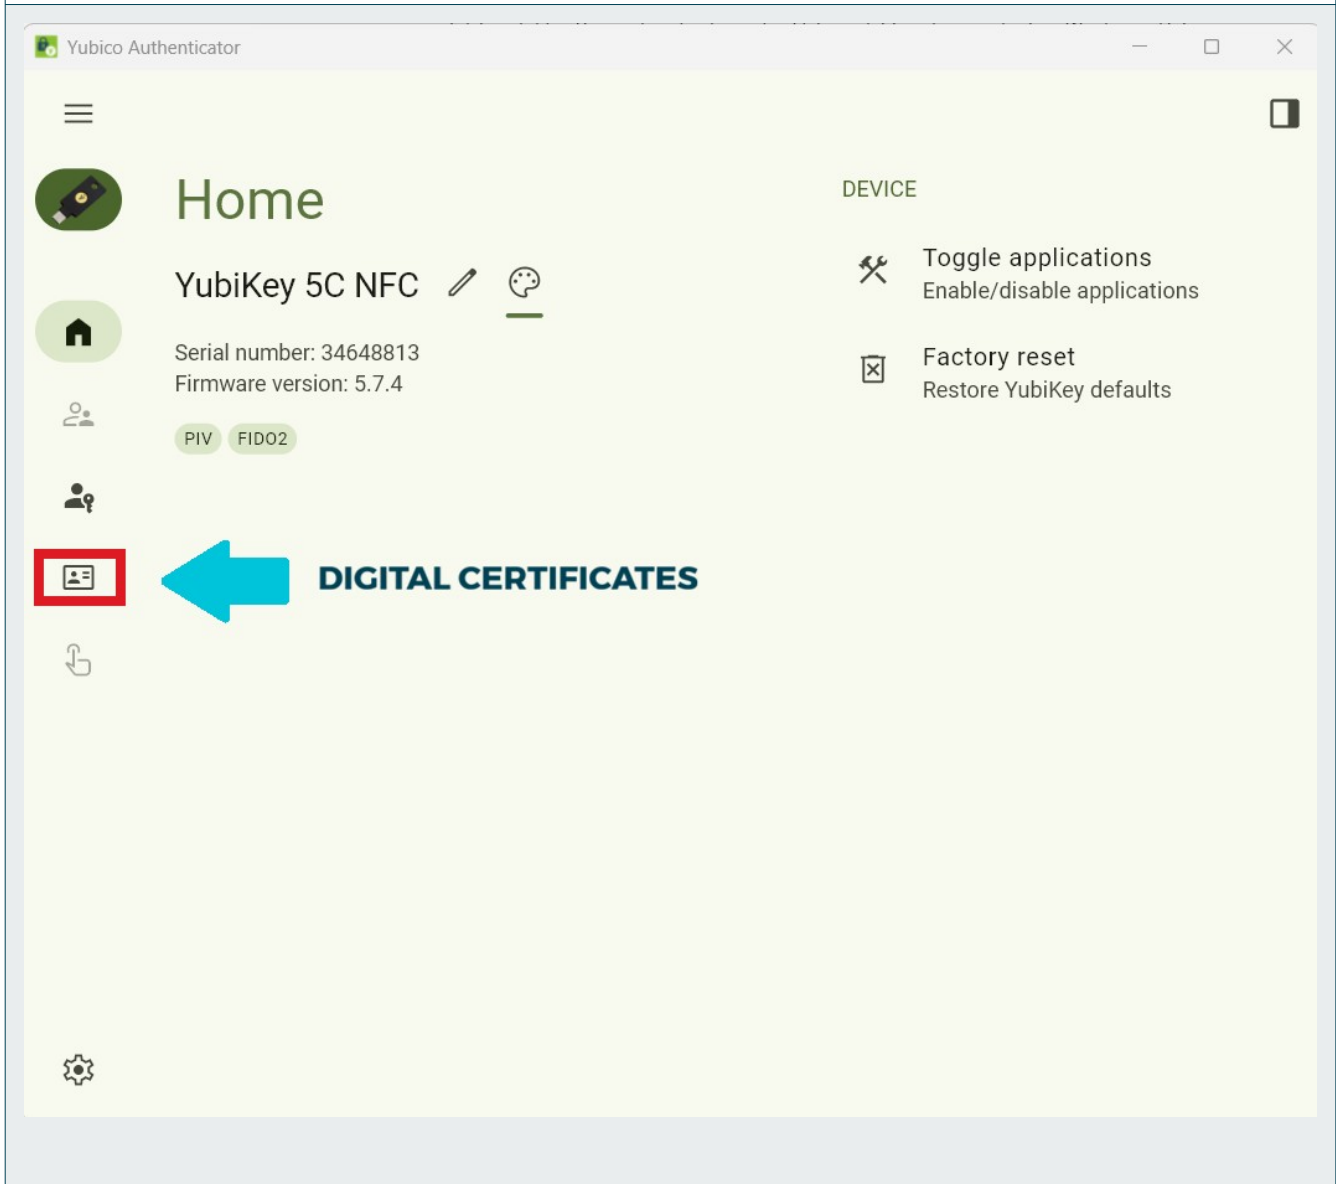

With the provided **USB-A to USB-C adapter**, simply plug the USB-A end into the computer and insert the **Security Key** into the USB-C port.

The provided USB adapter pictured below.

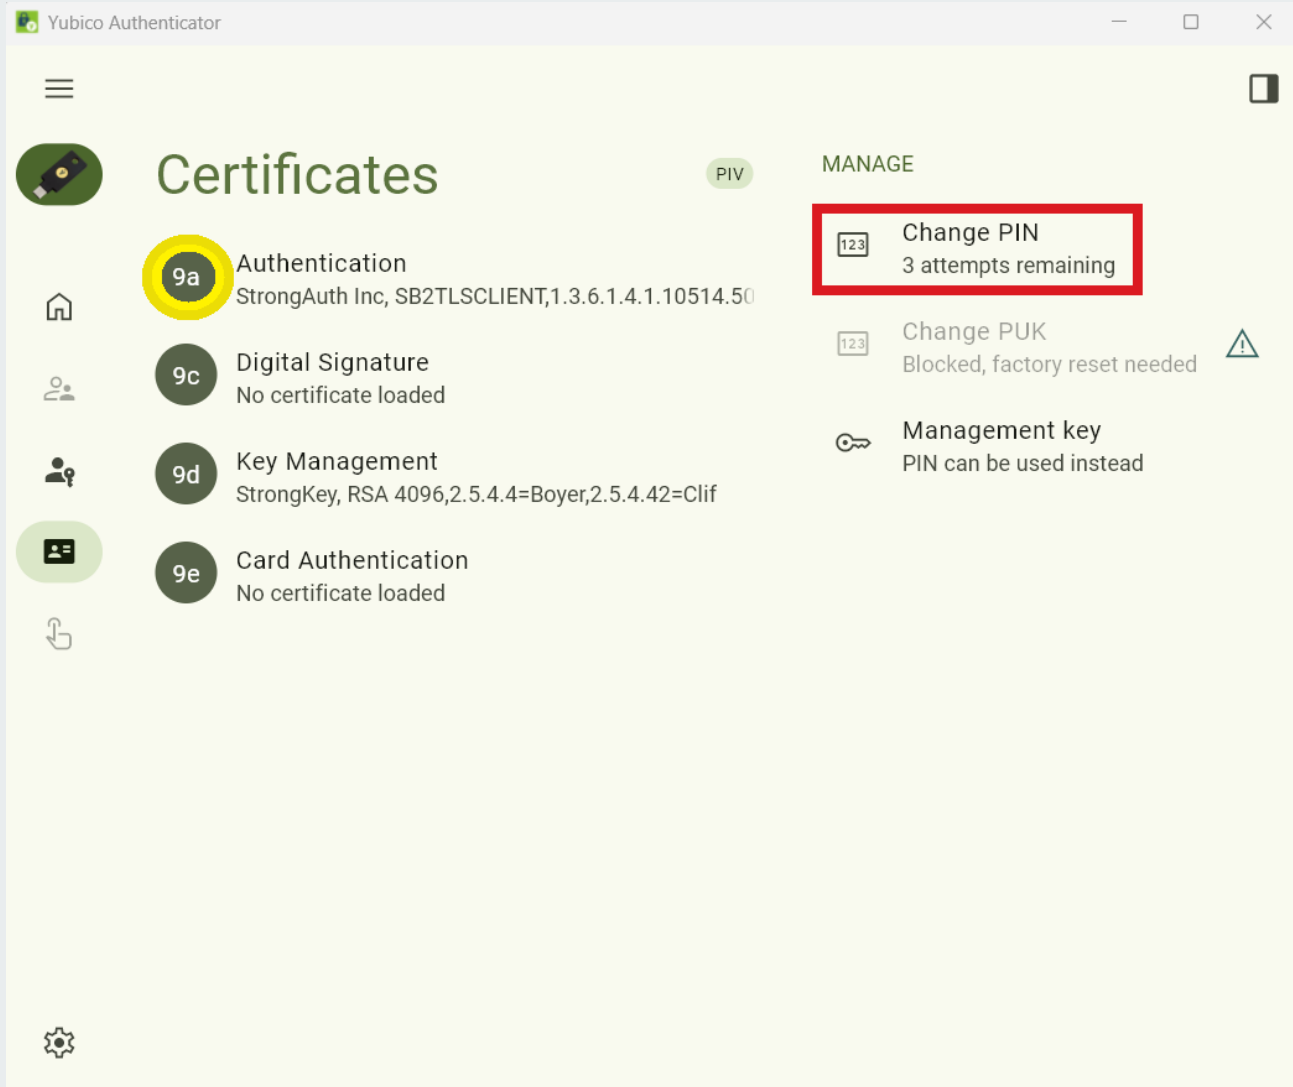

CHANGING THE DIGITAL CERTIFICATE PIN

From the home screen, navigate to the left and select the **Certificates** option from the menu.

Select the **Change PIN** option from the **Manage** menu on the right.

- In the top field, enter the **default PIN: 123456**.
- Enter the new PIN in the middle field. The PIN must contain 6 to 8 characters.
- Re-enter the new PIN in the final field to confirm.

Yubico Authenticator

Change PIN

Current PIN 0/6

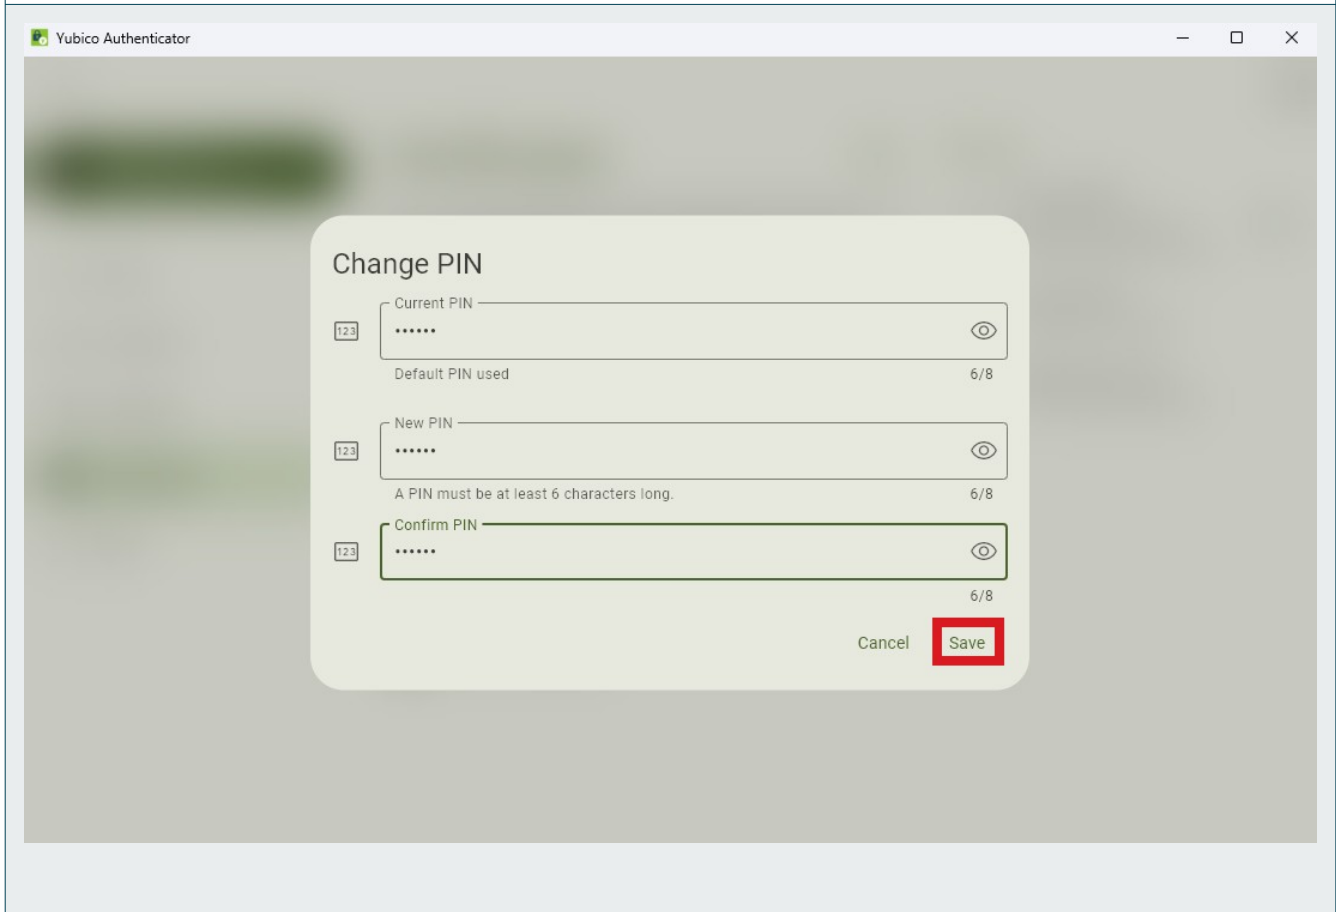

New PIN 6/8
A PIN must be at least 6 characters long.

Confirm PIN 6/8

Cancel Save

AP10 SAVE NEW PIN

Click **Save**. The application returns to the previous screen. If the process is successful, a “PIN changed” notification briefly appears at the bottom of the screen.

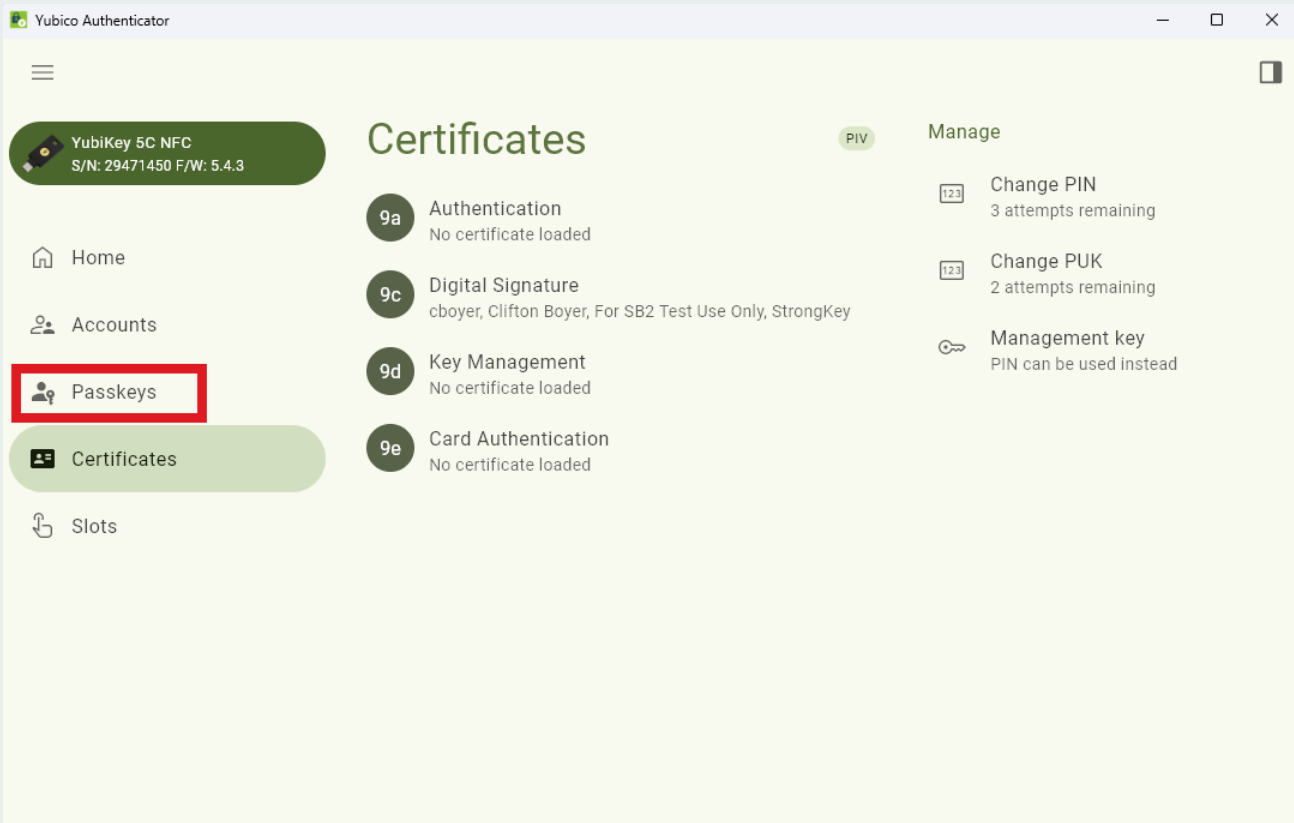

AP11

CHANGING THE FIDO CREDENTIALS PIN

To update the second PIN, click on the **Passkeys** menu option to the left.

NOTE

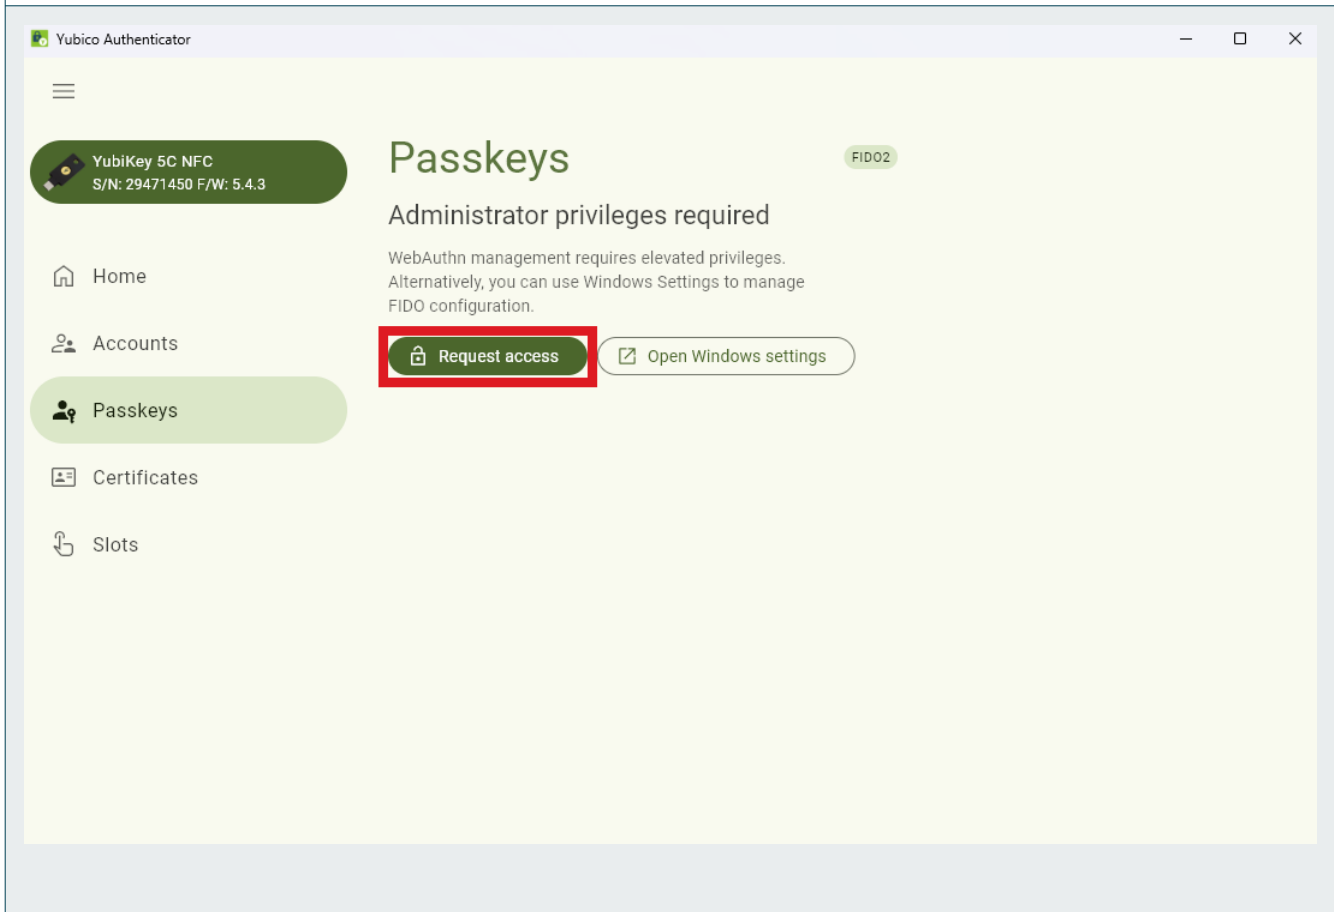

StrongKey recommends using the same PIN for the Security Key.

AP12

PASSKEYS MENU

In the Passkeys menu, select **Request Access**.

AP13

YUBICO AUTHENTICATOR APPLICATION PERMISSION

The Yubico Authenticator application will ask Windows for permission to implement changes on the computer. **Click yes.**

Select the **Change PIN** option located on the right of the screen.

- In the text field marked **Current PIN** type in your current PIN. If you have not changed it, it is 123456 by default.
- In the text field marked **New PIN** enter a new PIN of your choice. It must be a minimum of 6, and up to 63 characters.
- In the text field marked **Confirm PIN** enter the same PIN you selected.

B16 SUCCESS!

The display will return to the **Passkeys** menu, and a notification stating "PIN Reset" will briefly appear at the bottom of the screen.
